OVERVIEW

The Borough of Spring Lake adopted its last comprehensive Master Plan in 1974. The Borough has since issued Master Plan Reexamination Reports in 1981, 1988, 1995, and 2001. A supplemental Master Plan Recycling Element was adopted in 1988, a Shorefront Element was adopted in 1995, and a Housing Element was adopted in 1997.

To prepare this Master Plan, the Borough conducted a thorough review of the Spring Lake Master Plan, Reexamination Reports, and supplemental Master Plan Elements to assess the planning principles that guided the 1974 Master Plan and review the successes, failures, and unintended changes/consequences that have resulted from the Plan.

The 2010 Spring Lake Master Plan includes a comprehensive update to the Master Plan that includes the following elements: Land Use; Economic Development; Community Facilities; Recycling; Utilities; Housing; Historic Preservation; Circulation; Conservation, Recreation and Open Space; and Stormwater Management.

The Master Plan and vision for the future of Spring Lake were developed by holding community stakeholder meetings; reviewing existing planning reports; the timeless efforts of the Spring Lake Master Plan Subcommittee. It also involved special open house meetings with the public targeted to address each of the elements of the master plan and several town hall style meetings that provided a great deal of vital input from the community at large. The plan examines both the many positive qualities that should be preserved and the difficult problems that must be addressed, and provides recommendations to ensure that the exceptional quality of life in Spring Lake is sustained for future generations.

The Borough of Spring Lake is a radiant and picturesque seaside municipality within Monmouth County, New Jersey. It offers its residents and vacationers a relaxed atmosphere of gracious living. The Borough includes two (2) miles of beachfront and the longest non-commercial boardwalk in New Jersey that has made it a unique resort destination for more than 100 years. Its borders are clearly defined by this beachfront, two beautiful lakes at the north and south ends of town and the Jersey Coast Rail Line to the west.

The Borough has earned a place in history by maintaining its architectural integrity, the old-world charm of its downtown shopping district, the physical grace and beauty of its parks and the carefully landscaped entrances to the town, and the enduring home town character of its neighborhoods. Much of the Borough's charm can be attributed to its early planning and development, which is characterized by the unusually wide tree lined streets that establish the Borough's simple street grid pattern; the relatively narrow 50-100 foot wide and 150-foot deep single family lots; and the abundance of wrap around porches and the absence of fences in the front yards. In a world today where residences are often separated by gates and fences and large lot zoning and the focus of activity is shifted to the rear of yards on decks or patios, Spring Lake's residential development creates a strong sense of community and neighborhood, where front porches and front

yard activity bring the private and the semi private world together comfortably. These features allow for personal interaction with neighbors and people walking or biking through town.

Spring Lake's unique residential charm is enhanced by the abundance of parkland, open space, beaches, and its centrally located downtown shopping district. The combination of these factors creates a balance for the community where no one feature is very far away from one another, thus creating a walk-able interactive community, which today, is rare or obsolete in many towns.

Unlike many newer suburban communities that often consist of a series of largely unconnected subdivisions and car oriented strip shopping centers, Spring Lake can best be characterized as an easily recognizable and very accessible community of close-knit residential neighborhoods that flow into each other around a quaint main shopping street, resulting in a seamless transition of land uses, which is apparent as you walk down its tree-lined streets. One of the most important findings of the master plan efforts was the need to maintain the existing mix and balance of land uses and to strengthen or reestablish the important linkages that connect them.

To achieve these goals the Master Plan Committee believed it was important to study Spring Lake's **Past** to understand how it began and arrived at its **Present** condition; and to carefully evaluate the pros and cons of the current situation and the new challenges Spring Lake faces before charting its **Future**.

THE PAST – Spring Lake began as a small fishing village and farming community, like many other Jersey shore communities. Then in the 1880's it **rapidly transformed** into a seaside resort community with a variety of summer homes, ranging from palatial estates and large stately Victorian houses, to quaint Craftsman bungalows. Several mid-sized to large luxury resort hotels were constructed primarily along the oceanfront and Devine Park, along with many bed and breakfast inns, and several beautiful churches. The result was a remarkable distinctive vacation spot frequented by visitors from many parts of the country but primarily from New Jersey, New York and Pennsylvania.

During this early period of development the Boroughs' original planners and developers established its street grid system and varied lot sizes that placed larger more expensive homes to the east near the beach and more modest homes to the west; and created the extensive open spaces that provided an underlying structure and backdrop for the community of Spring Lake, that eventually resulted in today's comfortable balance between residential, open space and commercial uses.

The development of Devine Park from a natural spring is a wonderful example of this early planning. It was a very effective yet subtle use of casual recreational space to establish connectivity and important linkages that help make Spring Lake such a walk-able residential community, while also enhancing commercial development and success. Starting at the train station and Potter Park at the west end of town, visitors could comfortably stroll along the lake through Devine Park to the busy shops on Third Avenue

and walk completely across town towards the majestic Monmouth and Essex & Sussex Hotels and Ocean Avenue boardwalk that served as Spring Lake's major destinations.

THE PRESENT – Now, as time has passed and Spring Lake has **gradually changed** into a still affluent yet predominantly year-round residential community, it has seen the disappearance of many of the wonderful attractions of old. Today, many of the bed & breakfast inns and most of its luxury resort hotels are gone. As they studied these recent developments the Committee and its planning consultants realized that some of these changes were the direct result of the 1974 Master Plan and the fact that these old establishments were now designated pre-existing non-conforming uses, which limited their future. And one of the unintended consequences of the loss of these hotels and B&B's has been the recent decline of the downtown business district.

However, the Master Plan Committee and planners also recognized that despite careful planning and the best of intentions, much of what has happened to Spring Lake is the result of societal factors and market conditions that were beyond the Borough's control. Just as the Jersey Coast Rail Line brought hordes of tourists to Spring Lake, along with the Garden State Parkway it also made it possible for many Spring Lakers to commute to jobs in North Jersey and New York City so that more and more people could live here year round. The advent of relatively inexpensive and extensively available airline flights in the 1970's, and the growing popularity of other travel options like ocean cruise lines in the 1980's and 1990's made Spring Lake a much less frequently chosen destination for weeklong and longer vacation stays.

Among the most difficult and seemingly intractable challenges the Borough faces today are the worsening environmental degradation and catastrophic flooding at Wreck Pond and to a lesser degree at Lake Como and Spring Lake. The loss of effective tidal flow and extensive development that has and continues to occur in communities like Wall and Howell Townships to the west has resulted in frequent beach closings and flood damage to over a hundred surrounding homes. These problems are beyond the Borough's direct control but it must work with other stakeholders in surrounding communities like Sea Girt, Spring Lake Heights and Wall Township and the responsible State and Federal authorities to resolve them through immediate action if it is to stop and correct the environmental damage that has occurred and properly protect its citizens from certain future flooding.

Though much has changed one thing that has remained more or less the same, actually increased, is the volume of summer tourists that flock to Spring Lake's beaches each summer, especially on weekends. Spring Lake maintains some of the nicest easily-accessed public beaches in the State of New Jersey. A major goal of the Master Plan is to take advantage of the continuing popularity of Spring Lake's beaches to strengthen its remaining hotels; B&B's and retail establishments as these are major contributors to its historic architectural heritage and the unique charm and character of the town. This can be achieved in collaboration with the Chamber of Commerce and the BID with improved way-finding signage and informational programs targeted to beachfront like the Pavilions and at major entry points and routes into town.

THE FUTURE – What is the **VISION** for the future? Where does Spring Lake want to go from here? The 2010 Master Plan document brings to the forefront, the current planning issues the Borough is facing now and expects to face in the future. It also introduces new planning principles like sustainable design and development that it promotes as a way to conserve critical resources and energy as the Borough implements on-going and future projects. The master plan establishes a common vision and is guided by several planning principles targeted to protecting the unique quality of life and historic charm of Spring Lake; and to maintaining the delicate balance of land uses and the linkages that connect them; while also addressing troubling concerns about overdevelopment, continuing traffic issues and serious environmental and flooding problems that have grown worse in the last two decades.

In part as a result of the Master Plan process the Borough has already begun to tackle several of its more pressing problems – implementing collateral studies and modifying and creating new ordinances to address them.

For example, while most Spring Lakers are especially proud of their existing homes and with the ongoing improvements and new additions to its residential neighborhoods there are some serious concerns. In the past, few homes were built to the limits that were established under the 1974 Master Plan and subsequent Land Use Regulations. Homes were built to maintain a balance between livable space and open space on lots, which is what helped to create the nice balance we see in most neighborhoods.

Today, many new home owners look to maximize the allowable square footage, and as a result some of these houses do not fit comfortably into the framework of the existing neighborhood, a problem that is most noticeable in the R-2 Zone. This is due in part to the tremendous increase in property values over the last three decades and to the changes in peoples’ ideas of how a new residence should look, and how large it must be to house the growing number of space types and functions it should provide. Because of the desire to live in a wonderful town like Spring Lake, and the perceived need for these new added amenities there is growing pressure to tear down many of its older homes and replace them with new larger homes, or in some cases two homes, which has become a serious preservation concern. An active group of citizens formed the Preservation Alliance of Spring Lake 10 years ago in response to the loss of historic buildings throughout the Borough.

As previously mentioned, the downtown has seen a decline in the number of retail businesses on the first floor over the years that are being replaced with uses that are not typical of an active downtown. Because of this, the Borough has taken measures to limit ground floor office space, permit outdoor dining and to create the Spring Lake Special Improvement District.

Another serious related problem is the limited amount of parking available downtown, and the Borough’s current parking standards that make any development difficult. If the Downtown is to maintain its character and continue to function as a centerpiece of the

community, changes to these sections of our ordinances must be given serious consideration.

In summary the Committee and the planners have responded to Spring Lake's residents and their desires to maintain the general character and feel of the Borough today, especially as seen in its residential neighborhoods – encouraging a balance between appropriately sized and compatibly designed new construction and the preservation and improvement of historic homes, public buildings and commercial establishments; and to promote the continued revitalization of the downtown. The Master Plan recommends the continued maintenance of our pristine beaches and many open spaces and recreational facilities and the repair and/or replacement of its two Pool & Pavilion facilities and our aging water and sewer utilities infrastructure. It recommends additional provisions to improve traffic flow and safety at critical accident prone intersections and streets. And most importantly it implores the Borough to continue to work aggressively with Federal State and local authorities to ensure that they dramatically improve water quality and implement the timely installation of effective flood control measures at Wreck Pond and Lake Como.

This comprehensive Master Plan provides a definitive plan with clearly stated goals and objectives and strategies that identify what makes Spring Lake so special, and what needs to be done to address the problems reflective of the modern market and social conditions, while also describing what should be retained and enhanced to maintain the quality of life, improved environmental conditions and the warm community feel that is Spring Lake.

In support of this “vision” for the future this Master Plan also articulates subsequent actions the Borough of Spring Lake should take in an implementation plan and recommends that the Borough develop policies and land use regulations that are consistent with this vision – as Spring Lake considers **where it has been, where it is today, and determines where it wants to go in the future.**

2010 MASTER PLAN GOALS & OBJECTIVES

Goals:

1. Advance the purposes of the Municipal Land Use Law (MLUL) as contained in 40:55 D-2;
2. Preserve the character of existing residential neighborhoods forming the predominant charm of the Borough;
3. Provide a balanced land use pattern and appropriate development controls;
4. Guide appropriate development, redevelopment and growth in a coordinated and managed approach;
5. Strengthen the vitality of existing commercial districts;
6. Preserve, protect and enhance parks and open space while protecting environmentally sensitive, natural, and unique physical features;
7. Maintain the historic resources and natural beauty of the Borough;
8. Continue to repair and replace municipal infrastructure;
9. Develop an implementation plan to support the suggested revisions to the current zoning ordinances, and to proceed with additional studies to support the recommendations of the Master Plan.

Objectives:

1. Ensure practical and appropriate development controls in order to preserve and protect open space, conserve the natural landscape and protect the ecologically sensitive areas of the Borough;
2. Protect neighborhood characteristics including the by enforcing buffer areas between non-residential and residential land uses, between different residential types, and along ecologically sensitive areas of the Borough;
3. Maintain and upgrade the existing system of parks, recreation and open space to provide for Borough residents of all ages, abilities and disabilities consistent with current and projected community needs;
4. Preserve the high level of public services and encourage the maintenance and creation of new public facilities in order to accommodate population changes, economic growth and the changing needs of residents;
5. Provide mechanisms to encourage the continued upgrade of the existing utility infrastructure, including public water, stormwater management, and existing pump stations;

6. Provide for the Borough's fair share of affordable housing required by law and as set forth in the Housing Plan Element;
7. Preserve and enhance the residential character of established neighborhoods, maintain a reasonable balance of housing choices, and provide for in-fill development and adaptive reuse;
8. Promote historic preservation efforts that will maintain the Borough's unique historic resources as designated;
9. Promote building and site improvements that adhere to reasonable limitations on size, bulk, and site disturbance in relationship to the existing fabric of the community;
10. Encourage the development of a circulation system that accounts for roadways, mass transit, pedestrian/bicycle routes and greenway corridors;
11. Coordinate land uses with transportation facilities including, but not limited to, bus stops and parking for resident commuters; to facilitate access; and encourage alternatives to driving;
12. Encourage the sharing of services with neighboring municipalities to lower Borough operating and maintenance costs while maintaining or increasing their effectiveness;
13. Promote a diverse economic base that reflects the market conditions in town and the region, with a focus on maintaining a strong off-season business environment;
14. Support and promote public awareness of and participation in Borough issues, initiatives, boards and commissions;
15. Encourage sustainable "Green" development;
16. Coordinate with local, county and state environmental efforts to concentrate on regional watershed based planning, with focus on non point source pollution and flood controls;
17. Encourage the revitalization of vacant buildings and encourage the rehabilitation and restoration of brownfields and other contaminated buildings and land.

Thus, the overarching goal of the Master Plan is to move forward while respecting and recognizing that all change is not bad and all growth is not good. The Master Plan is a formal document required by the State of New Jersey Municipal Land Use Law, and more importantly to Spring Lake, it is a picture of the past and a vision for its future.

DEMOGRAPHICS

Demographics serve an important purpose in the drafting of a Master Plan. Demographics show socio-economic and housing trends in the Borough's population and justify why development has evolved as it has. Demographics also offer insight to the future progression of a municipality. The data compiled from demographic charts can be analyzed to understand the expected future needs of Spring Lake with regard to its: parking facilities, traffic patterns, infrastructure, land use, and population density. An illustration of the Borough's population, housing, racial composition, and age distribution taken from 2000 US Census data illustrates how the Borough of Spring Lake has changed over recent decades. Generally, these patterns are consistent with larger scale demographic patterns found across the State, and across the U.S. in general.

New Jersey

New Jersey is the most densely populated state in the Union. Between 1990 and 2000, the NJ population increased by approximately nine percent (8.9%). The 1999 median household income in New Jersey was \$55,146, which is substantially higher than the national median household income of \$41,994. Eighty-two percent (82.1%) of the New Jersey population ages twenty-five (25) and older has a high school diploma or equivalent, while approximately thirty percent (29.6%) of the population holds a bachelor's degree or higher. Both of these percentages are higher than the national average.

Monmouth County

Monmouth County has a land area of 472 square miles (1222.48 km²) and is located in eastern-central New Jersey. The County is comprised of fifty-three (53) municipalities, each with its own unique character and identity. There is a great deal of variety in Monmouth County's municipalities, ranging from small cities to wide open agricultural areas, and virtually everything in between. Likewise, there is a variety in the landscape of the County, including the highlands and cliffs of the Bayshore area, the shoreline and riverways of the eastern part of the County, and the rolling hills of western Monmouth County. Opportunities for both active and passive recreation in the County are outstanding. The County is home to twenty-seven (27) miles (43.4 km) of beaches, numerous parks, marinas and golf courses. Residents can also enjoy performing arts at a number of local theaters and colleges. All these opportunities combine to give Monmouth County a high quality of life standard.

The Borough of Spring Lake

The Borough of Spring Lake has a land area of 1.70 square miles (3.4 km²) and is located in the South Coast area of Monmouth County. Spring Lake became known as a Victorian resort community with its many grand waterfront hotels and homes, some of which serve as "Bed & Breakfasts" today. Spring Lake is host to some of the finest seaside architecture in New Jersey and has maintained itself as a popular summer destination, with its 2 miles (5 km) of boardwalk. Spring Lake Borough is a comparatively wealthy municipality in the State of New Jersey with a per capita income of \$59,445 and a median household income of \$89,885.

Population Characteristics

The population of the Borough of Spring Lake increased steadily over the earlier part of the 1900's. The Borough's population rate grew at its highest rate between 1950 and 1960. Then, as illustrated through **Table 1** below, the population growth during the following decades began to slow, before Spring Lake actually lost residents between 1980 and 1990.

The 2000 US Census counted a population of 3,567 persons. Meanwhile, the 2008 population for Spring Lake in 2008 totaled 3,572. The population had a very slight increase of .14% between the time period of 2000 and 2008. The population of Spring Lake Borough has increased at a slower rate than Monmouth County over the last seven decades and, at a slower rate than the State of New Jersey (NJ) over the last two decades, as indicated in the **Table 2** below.

Table 1: Spring Lake Borough Population Growth by Decade: 1930-2008		
Year	Population	% Change
1930	1745	-
1940	1650	-5.4
1950	2008	21.7
1960	2922	45.5
1970	3896	33.3
1980	4215	8.2
1990	3499	-17.0
2000	3567	1.9
2008	3572	.14

Sources: U.S. Censuses of Population and Housing

Table 2: Population of Monmouth County and NJ State by Decennial Census 1930-2008				
Year	Monmouth County Population	NJ State Population	% Change County	% Change State
1930	147,209	4,041,334	-	-
1940	161,238	4,160,165	9.5	2.9
1950	225,327	4,835,39	39.7	16.2
1960	334,401	6,066,782	48.4	25.5
1970	461,849	7,168,164	38.1	18.2
1980	503,173	7,364,823	8.9	2.7
1990	553,124	7,730,188	9.9	5.0
2000	615,301	8,414,350	11.2	8.9
2008	659,353	8,682,661	7.1	3.19

Sources: U.S. Censuses of Population and Housing

Population Projections

Following the 2000 US Census, the North Jersey Transportation Authority (NJTPA) estimated the Borough of Spring Lake's population to be 3,610 residents in 2005. They anticipate that number to increase to 3,640 by 2010 (see Table 3 below). By 2015 the NJTPA estimates that the Borough population will continue its slow and steady gains in comparison to the population recorded in the 2000 Census. **Table 3** (below) illustrates population estimates for the Borough of Spring Lake that has been projected by the North Jersey Transportation Planning Authority (NJTPA) through the year 2030.

Table 3: Population Projections for the Borough of Spring Lake: 2005-2030		
Year	Population	% Change
2000	3,570	1.12
2005	3,610	0.83
2010	3,640	0.27
2015	3,650	0.27
2020	3,660	0.27
2025	3,660	0
2030	3,660	0

Source: NJTPA

Age

The population estimate for Spring Lake in 2000 was 3,567. It should be noted that the under 5 years cohort contained the most growth between the years 1990 and 2000. The working class age (ages 21 to 64) cohort decreased to 8.29% during the ten-year period between 1990 and 2000. Based on the US Census Data, the overall median age in the Borough grew marginally as Spring Lake's median age in 1990 was 46.3, compared to 47.7 years of age in 2000. Spring Lake residents who were fifty five (55) years of age or older made up over a third of the population at 37.92 % in 2000. A breakdown of the Borough's population by age is illustrated below in **Table 4**.

Table 4: Age Distribution of the Population Borough of Spring Lake: 1990 & 2000			
Age Group	1990	2000	% Change
Under 5 years	133	205	54.1
5-19 years	564	619	9.75
20-64 years	2,013	1,846	-8.29
65 years and over	789	897	13.6
Total	3,499	3,567	1.94

Sources: U.S. Census, 1990 and 2000

Racial Composition

The results of the US Census in 1990 and 2000 indicated that the racial composition of Spring Lake (**Table 5**) remained quite stable during this time period. At over 98%, the Borough's White population comprises the vast majority of residents in Spring Lake. Subsequently, although residents of other races did increase (Black/African Americans increased from 3 to 12 and "Other" racial groups increased from 6 to 22), these groups combined still comprise only 1.23% of the Borough's population. In addition, the Borough's Asian population remained unchanged.

Table 5: Spring Lake Borough Racial Composition 1990-2000			
Race Group	1990	2000	Percent Change (%)
White	3,476	3,523	1.35
Black/African American	3	12	3
Native American	4	0	-1
Asian/Pacific	10	10	0
Other (Including 2 or more Races)	6	22	266.67
Total	3,499	3,567	1.94
Sources: 1990 US Census, 2000 US Census			

Education

As show in **Table 6**, during the decade between 1990 and 2000, the Borough of Spring Lake experienced a dramatic increase in residents who hold a Bachelor's or Professional level of education. There was an 8.36% increase in Bachelor's degree holders than those who held a graduate or professional degree. The Borough saw a decrease in the number of people who had attended high school and did not obtain a high school diploma or the equivalent for the time period between 1990 and 2000.

Table 6: Educational Attainment 1990-2000 Ages 25 and Older			
Educational Group	1990	2000	Percent Change (%)
Less the 9 th grade	65	13	-80
9 th to 12 th grade, no diploma	164	78	-52.4
High School graduate (or equivalent)	524	440	-16.03
Some college, no degree	525	393	-25.14
Associates Degree	289	130	-55.01
Bachelors Degree	589	855	45.16
Graduate/Professional degree	505	691	36.8
Total	2,661	2,600	
Sources: 1990 US Census, 2000 US Census			

Housing Stock

The median housing unit cost in the Borough of Spring Lake, according to the 2000 U.S. Census was \$638,200. The Borough's housing stock holds significantly more value than the median value of homes when compared to the United States as a whole, as well as the State of New Jersey, which is illustrated within **Table 7**, below:

Table 7: Median Home Values 2000 & 2007				
Year	United States	New Jersey	Monmouth County	Spring Lake
2000	\$163,900*	\$231,728***	\$325,990***	\$638,200***
2007	\$229,100**	\$415,000***	\$516,172***	Not Available
Source: * 2000 US Census ** US Census Website: http://www.census.gov/const/uspricemon.pdf *** New Jersey Builders Association: http://www.njba.org/housingData/medianPrices.asp				

The breakdown of the Borough's housing units by their value at the time of the 2000 US Census is provided below in **Table 8**.

Table 8: Value of Owner Occupied Housing Units		
Price	Number of Units	Percent
Less than \$50,000	0	0
\$50,000 to \$99,999	0	0
\$100,000 to \$149,999	0	0
\$150,000 to \$174,999	0	0
\$175,000 to \$199,999	8	0.73
\$200,000 to \$249,999	31	2.83
\$250,000 to \$499,999	371	33.94
\$500,000 to \$999,999	424	38.79
\$1,000,000 or more	259	23.69

Total Owner-Occupied Units	1,093	100.0
Source: 2000 US Census		

Table 9 represents the percentage of houses (owner-occupied) constructed during past decades. In conjunction with the rapid development of the 1950's and 1960's, the largest percentages of Spring Lake Borough's housing units were constructed in the 1950's. The number of housing units constructed has steadily decreased in every decade except in the 1980's when it grew slightly from 4.1% to 7%. Most recently, due to Spring Lake's generally built out nature, during the decade between 1990 and 2000 only 9.3% of the total housing stock in Spring Lake Borough was produced.

Table 9: Age of Housing Stock		
Year Built	Number of Units	Percent
1999-2000	8	0.7
1995-1998	45	3.9
1990-1994	55	4.7
1980-1989	81	7.0
1970-1979	48	4.1
1960-1969	71	6.1
1950-1959	152	13.1
1940-1949	81	7.0
1939 or earlier	620	53.4
Total	1,161	100.00
Source: 2000 US Census		

This decrease in housing production is due to the limited developable property as previously stated, which lends itself to the development of sub dividable lots and teardowns of existing structures. In many cases these teardowns are of residential structures that could be classified as historical structures or identified as architecturally significant structures, which residents and visitors identify with the image of the Borough of Spring Lake. According to Table 9, seventy-three (73%) of all homes in Spring Lake were constructed prior to 1960. In many cases these homes, were designed for families years ago do not function for current families, whether it is an undersized master bedroom, the lack of additional bathrooms or an outdated layout. This leaves property owners with the option to rehab the older home or construct a new home on the existing lot. Since the 2000, 138 structures have been demolished, of which all but one where residential dwellings. There was a single mixed use building demolished in the downtown in 2007.

Tables 10 and 11 given below depict the housing characteristics of the Borough and the changes it has undergone since 1990. Housing vacancy dropped by ten percent (10.01%) from 519 in 1990 to 467 in the year 2000. The number of single- family detached units increased by four percent (3.6%), while the two (2) and multi-family attached units decreased in number considerably. The Non-Family households in the Borough increased by almost three (3) percent since 1990 and simultaneously, the household size decreased from 2.53 in 1990 to 2.43 in 2000.

Table 10: Housing Characteristics Borough of Spring Lake: 1990 & 2000			
Occupancy and Tenure	1990	2000	Percent Change

As seen in Table 11 above, the majority of the residential structures in Spring Lake are single-family units, which account for ninety one percent (91%) of all residential structures in the Borough. The next largest type of residential structure is the structure with fifty (50) or more units. (Essex and Sussex Senior Housing)

LAND USE ELEMENT

Introduction

The Land Use Plan Element establishes long-range goals for the land use in terms of the types of land uses that are encouraged as well as appropriate densities within the Borough. The Land Use Plan serves as the foundation and basis for the zoning ordinance, which, in accordance with the Municipal Land Use Law (MLUL), should be substantially consistent with an adopted Land Use Plan.

According to the MLUL at NJSA 40:55D-28, a master plan must include a "statement of objectives, principles, assumptions, policies and standards upon which the constituent proposals for the physical, economic and social development of the municipality are based." This statement is often expressed as a series of goals and objectives. The goals and objectives for this Land Use Plan Element, as well as the Statement of Goals and Objectives articulated earlier, provide a foundation for this and other plan elements that comprise much of the remainder of this document.

Goals & Objectives

The Goals of the Land Use Element are as follows:

1. Provide a balanced land use pattern that preserves residential neighborhoods, strengthens the vitality of commercial districts, preserves and addresses parks and open space, protects environmentally sensitive natural features, accommodates community facilities and enables local/regional circulation.
2. Prevent, to the maximum extent practicable, the intrusion of nonresidential uses into residential neighborhoods.
3. Maintain existing residential neighborhoods as attractive, high quality areas and ensure that renovations and new construction are compatible with existing neighborhood character.
4. Encourage a mix of quality commercial uses, retail, and entertainment/dining to create a more vibrant Third Avenue District that will service both local and regional markets.
5. Evaluate existing development patterns and zones within established neighborhoods and commercial districts in order to make recommendations for zoning changes if warranted, while paying particular attention to overall residential densities.
6. Encourage participation of adjoining municipalities in Spring Lake's planning process in order to ensure that those planning initiatives that transcend municipal boundaries can be adequately addressed.

The Objectives of the Land Use Element are as follows:

1. Evaluate and recommend, if required, revisions to the Borough's current Land Use Ordinance to encourage the maintenance of traditional neighborhood elements such as sidewalks, front porches, public spaces, green spaces, and street trees, and to resolve existing problems that have been identified by the Planning Board.
2. Recommend changes to the Borough's Zoning Ordinance in order to reduce the risk of flooding, improve water quality and manage stormwater. Specific areas for evaluation should include impervious lot coverage and/or building coverage.
3. Encourage the restoration of historic buildings within the Borough in order to strengthen the harmony and appearance of the Borough.
4. Ensure that all new construction and alterations and/or renovations fit harmoniously with the historic and classic architectural character of the Borough.

EXISTING CONDITIONS

As the separation, mixture, and development of land uses in a municipality determine to a large extent how a town feels and functions, it is imperative to review the Zoning and Land Use Plan that Spring Lake developed through its last Master Plan in 1974 and compare it with the Spring Lake of the present day.

The pattern of Spring Lake's current land uses, as established by the 1974 Zoning and Land Use Plan, as well as the Borough's current zoning, has been mapped in a Geographical Information System (GIS) and is included within this report as **Figures 1, 2, and 3**. As illustrated on these Figures, Spring Lake has a land use pattern that is predominantly residential in nature. It should be noted, however, that over the years the Borough has experienced a significant transformation from primarily a resort and summer community to a year-round bedroom community, but one, which still receives large numbers of visitors during the summer season.

Despite the transformation that has taken place over the past several decades, there are notable differences between the Borough's 1974 Zoning and Land Use Plan when compared to Spring Lake's current zoning and land uses. The first difference can be seen in the vicinity of Devine Park and the Train Station. According to the 1974 Land Use Map, this area was proposed to be an office commercial zoning district (OC). In addition, the area just north of this district, in the area along the Borough's border with Spring Lake Heights from Passaic Avenue moving north past Brighton Avenue, was recommended to be a Wholesale/Warehouse Commercial Zoning District (WC). These areas are illustrated on **Figures 2 and 3**. However, despite the recommendation for zoning changes in these areas, they have remained both R-2 (Single Family Residential) and GC (General Commercial).

The final significant difference between Spring Lake’s 1974 Plan and the current zoning relates to the Essex and Sussex Hotel property as well as parcels in and around the site. In the 1974 Plan, the Borough identified the Essex and Sussex property and surrounding parcels as R-3 (Single Family Residential 11,250 sq. ft. per Dwelling Unit) Zoning District. However, Spring Lake’s current zoning finds the Essex and Sussex part of a special CS-SC (Common Services Residence-Senior Citizen) Zoning District for the redevelopment of this site as a luxury senior condominium. This is the result of recent litigation involving the E&S property. In addition, the current R-3 zoning district was moved farther north terminating at Warren Avenue.

The Borough of Spring Lake contains within its borders 1.7 square miles or 1,088 acres of land. That number is broken down into 1.3 square miles or 832 acres of land area and 0.4 square miles or 256 acres of water. The Borough is located within Southeastern Monmouth County. The Borough, over the past several decades, has approached full build-out, however, as typical for many mature suburban communities, in recent years Spring Lake has been evolving as a community. As a result, while the inventory of developable parcels has not changed substantially over the past 25-30 years, a number of land use changes have occurred that have had an impact on the land use character of the community.

The Borough of Spring Lake is comprised of a variety of land uses including residential, commercial and public uses. Information on the total acreage of land developed for various uses, as well as remaining vacant land, is compared for the years 1972 and 2008 in the following table:

Table 12: Land Use Distribution				
Land Use Categories	Acreage 1972	Percent of Total	Acreage 2008	Percent of Total
Residential	376.4	34.60	440.24	40.46
Commercial	40.1	3.68	21.35	1.96
Public and Quasi Public	140.2	12.89	221.03	20.32
Vacant	19.9	1.83	14.97	1.38
Water	256	23.53	256	23.53
Other	255.4	23.47	134.41	12.35
Total	1088	100	1088	100

Source: NJPM Tax Date, Spring Lake Borough 2008

Historically, the dominant land use within the Borough has been and continues to be residential, predominately single-family detached housing units. However, the percentage of total area devoted to residential land uses has increased from 1972 to 2008 by 63.84 acres. Commercial land uses have declined since 1972 by approximately

19 acres, reducing the overall percentage of commercial development from 3.68 percent in 1972 to 1.96 percent in 2008.

While commercial land uses have declined over the past 35 years, the amount of land area dedicated to public and quasi-public uses has increased from 140.2 acres in 1972 to 221.03 acres in 2009. A significant portion of that increase in open space was the creation of Marucci Park. Unfortunately, these types of land uses do not typically contribute to the Borough's tax base and as a result place a larger burden on the residential tax base within the Borough. Finally, Spring Lake's inventory of vacant properties has diminished over the past 35 years, leaving only 14.97 acres or 1.38 percent of the Borough as undeveloped property. As such there are few opportunities for new development within the Borough.

EXISTING ZONING

Zoning is a legal tool for regulating development. In general, zoning ordinances control the types of uses, as well as their layout and intensity. Zoning is expressed through text regulations as well as a map delineating various zone districts. The New Jersey Municipal Land Use Law (MLUL) permits municipal governing bodies to adopt a zoning ordinance. According to the MLUL, a zoning ordinance generally must be "substantially consistent" with the municipality's master plan.

Permitted uses in New Jersey include principal uses (the primary use of a property), accessory uses (only permitted in conjunction with a principal use), and conditional uses (permitted only if certain criteria are met). The Borough's Zoning Ordinance includes six zone districts: three single-family residential districts (R-1, R-2, R-3), two commercial zone districts (GC & RC) and a common services district (CS-SC or Essex & Sussex). The various zoning districts in the current Borough's Zoning Ordinance are shown on **Figure 2** and are described below.

RESIDENTIAL USES

Nearly 95 percent of the total parcels in Spring Lake are classified as single family residential. While there are several two and three family units, most of the multifamily is contained in the Essex and Sussex Senior Housing site. According to the US Census, the housing stock in Spring Lake is relatively old; approximately 50% of the housing stock being built prior to 1940. However despite the age of the housing stock, Spring Lake's housing stock is in excellent condition and homes are well maintained and exhibit fine and attractive architectural detailing of the period.

Spring Lake has three (3) separate single-family residential zones permitted, including the R-1, R-2 and R-3 single-family district zones. All three residential zones principle permitted uses include: one detached dwelling per lot, public playgrounds and parks, churches, public and private schools, and community residences. The permitted accessory uses for the same zones include: attached and detached private garages, tools

and storage sheds, greenhouses, gazebos, pools, cabanas, decks, patios, fences, swimming pools, signs and off-street parking.

Land values in Monmouth County, specifically the Borough of Spring Lake, have increased significantly over the course of the past decade. This has resulted in a large number of existing residential dwelling units being purchased and ultimately torn down and replaced with new residences. In most instances the new construction is much larger than the existing housing units. As a result, the issue of teardowns and over development has risen to the forefront of the issues and concerns within the community. In addition to the property values, there is continuing pressure for single-family homes to be expanded, along with a desire by many families to modernize their homes. Today, even for families of a moderate size, a fourth bedroom is often considered the norm. An additional full bathroom is also desired, particularly in the form of a master bedroom/bathroom suite. A larger kitchen with more space for more appliances (freezers, dishwasher, and a second sink) and an eat-in area within the kitchen is desired. The addition of a family room, apart from the living room, is the norm. Finishing basements, and transforming them into children's recreation rooms or entertainment spaces, is also commonplace. Finishing attics, sometimes via adding dormers to accommodate an extra bedroom, is another typical form of expansion. If the Spring Lake housing stock is to stay current with the needs of modern families, to retain their utility and their worth, and to allow for a continual turnover from shrinking families and aging households to younger families, such changes should be recognized and embraced. Important, however, is the need for such expansion to be accommodated in a manner, which respects neighborhood scale, character, and the privacy, as well as the use and enjoyment of adjacent or neighboring single-family residents.

Beyond these smaller renovations and expansions of more modest proportions, is another trend in the Borough, which for many is having a substantial impact on the community's inherent physical character. This is the substantial expansion in the size of existing single-family homes, either through additions and renovations-often doubling the size of the existing home or the total demolition of a home, and the rebuilding of a far larger single-family home in its place. Many aspects of this trend are positive. Such housing obviously fulfills the housing needs and desires of new families moving into the community, keeping pace with regional trends and modernizing older homes. However, this trend also has given rise to concerns relating to the transformation of neighborhood and aesthetic character.

Whereas the more moderate expansions-adding a second bathroom or family room and eat-in kitchen, or finishing a basement or dormering an attic, can occur without transforming the scale and architectural character of the home or neighborhood in which it takes place, the larger expansions or teardowns have in many cases totally transformed the scale and character of the home. This in turn has altered the once homogeneously scaled neighborhoods in Spring Lake, where the size and architectural character have tended to be fairly uniform and harmonious. The sudden introduction of one (1) or more such large and different-looking homes into such neighborhoods, a trend that is also occurring throughout the region and in many parts of the country, has

drawn opposition from existing residents where homes are at times dwarfed or overwhelmed by the scale or architectural styling of the new or renovated homes. However, members of the Spring Lake community appear to be divided as to whether these newer homes set a new and positive precedent and image for Spring Lake, or create cause for concern. Conclusions on appropriate limits to the size of houses in existing residential neighborhoods need to be developed.

The Borough of Spring Lake has one special designation district that is identified as the Common Services Residence Senior Citizen CS-SC, commonly referred to as the Essex and Sussex. The purpose of the CS-SC district is to permit construction of luxury common service residences for senior citizens in the Borough. The permitted uses are: luxury senior residences at a gross density of 55 units per acre, whose occupancy is limited to persons age 62 and older with a communal dining facility and single family detached houses in accordance with the standards of the R-3 District. Accessory permitted uses, only permitted in the CS-SC district, include and are limited to: beauty parlor, barber shop, bank branch, automatic teller, convenience store, newsstand, exercise room, recreational and social facilities and a common kitchen, all of which are for the sole use of the residents. In addition, off-street parking and signs are permitted accessory uses.

The Borough's 2001 Master Plan Re-examination report stated that the "Land Use Element of the Master Plan be amended to designate the Essex and Sussex Hotel property as 'CS-SC' to be consistent with the zoning amendment adopted in 1998 pursuant to the Court approved settlement agreement."

Since this reexamination, the Essex and Sussex hotel has been converted from a hotel into an upscale senior care condominium facility equipped with 165 studio, one-bedroom, and two-bedroom suites. Residents of the Essex and Sussex now receive three meals a day, as well as weekly housekeeping. Amenities include a health club, retail stores, a piano bar, cocktail lounge, and a library. Through this renovation and redevelopment, the Essex and Sussex avoided the fate of two other large historic Borough hotels: the Warren Hotel was razed in 2001, and the Monmouth Hotel was demolished in 1975. The parcels on which these two historic hotels formerly now contain single-family residential homes, keeping in line with the provisions of the Borough's adopted R-3 (Single Family Residential Zoning District), while the Essex and Sussex parcels were redeveloped under the zoning provisions of the parcels CS-SC (Common Services Residences-Senior Citizen District) designation that has added to the Borough's ordinance per the court ordered settlement agreement noted above.

Residential Recommendations

1. The Borough's current ordinance requires each corner lot to have two front yards with a minimum front yard setback requirement of 25 feet. As the Borough maintains a large number of 50' x 150' lots, compliance with this

requirement is difficult for most residents. This has been especially evident from both a zoning as well as a code enforcement perspective within the R-2 zoning district. Any amendment to this requirement would need to balance the Borough's desire to encourage reasonably sized dwellings on corner lots while, at the same time, minimizing the potential for tear-downs and subdivision, and most importantly minimizing the negative impact and administrative requirements to the residents. As this is a common problem among shore communities, BEI has investigated the approach taken by some of the Borough's surrounding communities in order to provide a few recommendations on how best to address the situation in Spring Lake. Several options are identified below:

- a. First, in order to minimize the risk of subdivision some, communities have increased the minimum lot width for corner lots from 50 feet to 75 feet, thereby forcing a variance situation should an applicant propose to subdivide a lot that is 100 feet wide. While this approach will reduce the number of conforming minor subdivisions within the Borough, it would render a large number of existing lots, specifically within the R-2 zoning district, as non-conforming. Should the Borough decide to implement this ordinance amendment, it is recommended that the ordinance include a grandfather provision that would enable lots that conform to the ordinance prior to the amendment to maintain their conformity provided that no further subdivision of the property would be permitted. This would enable a homeowner to put up a fence, or shed without applying to the zoning board of adjustment for a variance, provided that the fence or shed is conforming.
- b. A second ordinance amendment alternative is to have an applicant determine the actual "primary front yard" of the property based upon the location of the home's front door or the location of the mailbox. The second front yard would maintain a reduced setback requirement similar to a side yard setback requirement. An example of this methodology can be found within the Borough of Manasquan, where the front yard setback requirement is 25 feet, similar to Spring Lake, however the setback requirement for the second front yard is reduced from 25 feet to 15 feet thereby enabling a reasonably sized building envelope on those lots that are 50 feet wide. This amendment would enable larger structures on existing properties and would alter the prevailing setbacks in established neighborhoods.
- c. A third option (assuming a 15 and 25 foot front yard setback on corner lots) is to require a certain percentage or length of the corner lot structure to be recessed on the 15 foot front, while then transitioning the setback more towards the adjacent property setback. This allows a compromise by allowing additional developable area on a corner lot, deterring the development of a long narrow house, and adding architectural interest to the façade. It is recommended that an evaluation

of the properties within each zoning district be performed in order to determine whether such a provision would be a benefit to the community.

2. In order to promote the construction of front and side yard porches, the Borough of Spring Lake, may be interested in preparing a Porch Encroachment Ordinance. The porch encroachment ordinance would allow for an applicant's porch to encroach beyond the front and side yard setback for the establishment of a porch, which has been identified as a Goal of this Land Use Plan. The permitted encroachment beyond the setback lines should be specific to each zoning district so as to ensure that any construction would be consistent with the size and scale of the existing development and lot size within the specific zoning districts.
3. Existing zoning parameters provide requirements for buffers between residential and non-residential uses ranging from five to ten feet in width. It is recommended that the Borough review the existing buffer requirements that have been adopted to ensure that adequate area and planting are required between incompatible land uses, specifically in areas adjacent to single-family dwelling units.
4. As identified through various stakeholder meetings, the recent trend of tearing down existing building stock, only to replace it with structures that take advantage of every available inch of developable space within the lot, has created an inconsistent development pattern within the community. This is of particular concern within the Borough's R-2 and R-3 zoning districts. These districts maintain smaller lots on which large homes have been constructed. In order to address this continuing issue, the Borough may want to consider adopting revised zoning standards relative to building coverage and height.

Currently the Borough's Area and Bulk Standards, identified within the Land Use Ordinance, do not reconcile the maximum permitted building height to the other zoning parameters permitted within the various zoning districts. An adjustment of the maximum permitted building height creating a direct relationship between the lot area and setback provisions and the height should be considered. This would enable a consistent land use pattern that would maintain a sense of scale between the existing housing stock and any new construction. However, it is important to remember that being located along the Coastline of the Atlantic Ocean places a good portion of the Borough within the flood hazard areas. State regulations require that development be located above the floodplain, which requires in certain circumstances for the finished floor of the first story to be elevated. Therefore any ordinance adjustment needs to marry the need to maintain a sense of scale and consistency of established neighborhoods with compliance with State regulatory requirements.

Scale and consistency with existing building stock extends beyond just the height of new structures. The architectural design of newly constructed housing

units is of equal importance. It is recommended that the Borough adopt design standards that would require architectural details along all facades, rather than just focusing on the front façade. The introduction of design requirements, such as requiring bump-outs, fenestrations and other types of architectural details, would minimize the potential of having one-dimensional walls that may create adverse impacts on properties in and around the new construction. Adding these types of provisions would serve to reduce the visual impact of homes and/or structures that are located adjacent to a side yard property line, as well as promote adequate light, air, open space, and a more desirable visual environment.

5. Research should be conducted on how to create/enforce an incentive program that gives owners or prospective buyers of property “carrots” to either rehabilitate or preserve, or possible even move, historic homes in the Borough to protect the architectural and historic integrity of Spring Lake.
6. It is recommended that the Borough of Spring Lake consider adopting provisions to limit the maximum continuous wall length for a side yard. Adding such a provision would serve to reduce the visual impact of homes and/or structures that are located adjacent to a side yard property line as well as promote adequate light, air, open space, and a more desirable visual environment.
7. As many smaller lots in the Borough are transitioned into larger single lots through consolidation, the Borough may wish to conduct an analysis of the lots in the R-2 zone to determine the viability of re-zoning these areas into larger lot zoning of R-1. A zone change should only be made if it is determined that the said change in zoning will not create a substantial amount of non-conforming uses. Should the Borough decide to implement this ordinance amendment, it is recommended that the ordinance include a grandfather provision that would enable lots that conform to the ordinance prior to the amendment to maintain their conformity

COMMERCIAL DISTRICTS

The Borough’s commercial properties are located primarily in the two designated areas as discussed below, however there are scattered pre-existing commercial lots throughout the Borough including restaurants, bed and breakfasts and service oriented uses that coexist with the surrounding residential zoning. While there exist scattered commercial uses throughout the Borough, it is recommended that any future commercial development be limited to the existing zones permitting it. Many shore communities permit commercial uses along Ocean Avenue. Spring Lake is encouraged not to permit such uses along the oceanfront, but rather encourage the development/redevelopment of its existing commercial corridors.

The Borough has two business zones: the R-C -Retail Commercial Zone primarily oriented to retail uses and the G-C General Commercial Zone. A wide range of commercial uses are permitted as principal uses in both zones including retail sales of

goods and services; restaurants; banks; professional offices and business offices, office buildings, and office storage facilities, except on street level properties on Third Avenue; theatres; automobile sales (new car dealers) only in the GC Zone; wholesale distribution centers and warehouses, only permitted in the GC zone; and detached dwellings according to the R-2 Districts in the GC zone only. Permitted accessory uses in the R-C and G-C zones are those uses customarily incidental to the permitted principal uses, signs and off-street parking and loading. While the two (2) zones may allow many similar uses, the area and yard requirements are significantly different, as the minimum lot size in the GC District is 7,500 sqft, while the minimum lot size in the R-C District is 2,500 sf, which reflects the additional larger type of development permitted in the G-C District, such as warehousing, auto dealers and single family homes.

Recommendations

1. **Bed And Breakfasts:** The Borough's 1974 Master Plan had designated Bed and Breakfast uses within the Borough as non-permitted uses, thereby requiring any applicant interested in establishing or expanding this type of use to go before the Borough's Zoning Board of Adjustment. Throughout the course of the 2007-2010 Master Plan process it has become evident that there has not been an establishment of an alternative approach to these types of uses over the past years.

Since the designation of B&B's as non-permitted uses in 1974, the Borough has not pursued any policy changes to either curtail or revitalize these facilities. However, maintaining the Borough of Spring Lake's Bed And Breakfast (B&B) establishments serves to preserve the historic and architectural charm of the Borough, diversifies the economy, and maintains the tax base. The Borough should develop a strategy to encourage the preservation of the remaining B&B establishments. In addition the Borough should update the current ordinance to include a definition of Boarding Homes and Bed and Breakfasts. Bed and Breakfasts differ from boarding homes in that that B&B's are transient accommodations, with guests rarely staying longer than a few nights and typically with food service for breakfast only.

If the Governing Body decides in the future to designate B&B's as a permitted use, the Borough's zoning regulations should address parking requirements, the number of rooms that can be rented out, signage, requirement of owners to live on the premise, limit the length of time guests can stay or even limiting the meals served.

2. **Downtown:** The strategic revitalization of the Borough's Third Avenue Business District has been of paramount concern throughout the course of the 2007-2010 Master Plan process. As mentioned earlier, that wide range of commercial uses such as retail sales of goods and services and professional and business offices and office storage buildings are permitted in the area. It is recommended that retail uses be permitted only on the first floor, and office

uses only be permitted on the second and third floors. In order to generate activity and excitement in the district, allowing office uses on the ground floor will not encourage activity during evening and weekends.

While current zoning allows a height of forty feet (40') in the downtown, it is recommended that if any changes to current zoning allow office uses above the ground floor, the allowable height of these proposed buildings should be evaluated. Any such development must also consider the impact to current and future parking conditions and the potential COAH impacts on the Borough.

In addition the Borough should investigate revising the current bulk standards for the RC Zone, which would potentially allow for development of new buildings that could support onsite parking needs. Existing standards exceed the ability to provide parking.

As the downtown is a key, centrally located destination in the Borough, Spring Lake should develop a system of “linking” the downtown to other important areas of town by means of wayfinding, marked walking and biking trails and information kiosks located throughout the Borough. Additional details and recommendations for the downtown are included in the Economic Development section of the master plan.

3. **Train Station:** The Borough of Spring Lake is encouraged to consider initiatives to revitalize the commercial core near the train station. Such initiatives would allow the Borough to formulate a plan for this portion of Spring Lake that has seen its commercial land uses/facilities continue to decline over recent decades. Revitalizing the commercial area proximate to the train station would help in potentially expanding the Borough’s tax base.
4. Suggest the elimination of wholesale distribution centers, warehousing and auto dealers as a permitted use in the GC Zone.

PARKS AND OPEN SPACE

There are three municipally owned parks in Spring Lake as well as three large water bodies, including Lake Como, Wreck Pond and Spring Lake, in addition to fifty-four (54) acres of beachfront, which are discussed in more detail in the Conservation, Recreation, and Open Space Plan Element of this master plan. The largest park in Spring Lake is Devine Park; this 26.05-acre park that is centrally located and includes Spring Lake, also serves as the backdrop or visual termination for the Third Avenue Business District. The parks provide a myriad of active recreational facilities and athletic fields, as well as passive open space, and environmentally sensitive lands set aside for conservation.

ADDITIONAL RECOMENDATIONS

Street Trees

Protecting, planting and preserving trees in Spring Lake will serve to maintain the traditional look and feel of the Borough. To ensure that Spring Lake's famed tree-lined streets remain so, the Borough is advised to review the current Borough-initiated Street Tree Program and Section Code 356 (Trees) which sets forth standards for the removal, replacement, and preservation of street trees. Efforts should be made to work with the utility authorities when trimming trees around wires in order to reduce unnecessary and aggressive trimming of branches. Utility wires should be placed underground and utility installation should utilize existing utility poles for new construction or new service. The goal is to ensure that these standards are providing the adequate amount of protection, and that these provisions are being enforced to the maximum extent practicable.

Design Standards and Historical/Architectural Review

The Borough of Spring Lake is encouraged to establish a Historical Commission, or Architectural Review Board, as an advisory body, to review all land development and building plan applications so as to assist in keeping the character and identity of Spring Lake. This advisory board would have the ability to make recommendations for design changes to help encourage building proportions, architectural styling and preservation techniques that are compatible with the surrounding neighborhood. A more detailed description of the Borough's historic preservation goals, objectives and recommendations is found in the Historic Preservation Element of this document.

Design Handbook

Through the Borough Council, Planning Board, Preservation Alliance, the Business Improvement District and other community groups, the Borough of Spring Lake is encouraged to create a handbook for the redevelopment and/or preservation of properties in the Borough. The handbook would provide planning and design ideas, best management practices, and successful case studies of revitalization and/or preservation. This handbook could be used to illustrate methods for blending new structures/additions into the unique character of Spring Lake and would serve as an educational tool for homeowners, architects, elected officials, realtors, and others. For ease of use and access, it is suggested that any design handbook be made available on the municipal website.

Limited State and County Support

Through interaction with the Borough's elected officials and professional staff, it has become evident that Spring Lake is not satisfactorily securing grant monies that are available from both County and State initiatives for other public improvement/planning projects such as, Special Improvement Districts, Transit Villages, Eco Tourism and Historic District designations. Through this Master Plan effort, these planning related

initiatives will be applied to the Borough of Spring Lake to gauge the feasibility of Spring Lake obtaining additional grant funding for the initiatives listed above, and other items such as Parks and Recreational upgrades that may be available.

In addition, through this Master Plan effort the Borough is encouraged to become an active participant in the State of New Jersey's Plan Endorsement process. The State's Plan Endorsement program encourages municipalities to engage in cooperative regional planning and ensures that municipal, county, regional and State Agency plans are consistent with the State Development and Redevelopment Plan and with each other. An endorsed plan entitles municipalities and counties to a higher priority for available funding, streamlined permit reviews, and coordinated state agency services. However, it should be noted that obtaining Plan Endorsement is quite an involved process that generally takes years rather than months to complete. The link to the "Plan Endorsement Assessment Report Template for Municipalities" is:

<http://www.nj.gov/dca/osg/docs/municipaltemplate.pdf>

Because of Spring Lake's location at the bottom of the watershed and its proximity to the ocean, the Borough is faced with flooding concerns. The Borough should continue to work with the State and County agencies to reduce and mitigate local flooding by encouraging regional flood studies and control.

The Borough is encouraged to apply "Green" designs and maintenance concepts to public spaces and parks, where feasible.

Municipal Property and Open Space Zones

The Borough may wish to create two additional zones in town to identify all municipally owned and held for municipal use; municipally owned and held for outdoor recreation and open space/conservation use.

MOVING FORWARD

As Spring Lake moves forward with evaluating the merits of alternative ordinance amendments to improve the Borough's Land Use Code, it is important for the Spring Lake community to be involved in each step of the process.

In order to make the impacts of the proposed alternative amendments more evident to the public at large, the Borough is encouraged to involve the public in workshops that include visual renderings and pictures. This will allow the residents to make informed decisions regarding what alternatives are available to the Borough to improve items such as lot coverage, corner lots, architectural breaks/ styling, etc.

It should be noted that all Land Use Ordinance and policy revisions that are considered by the Borough should be accomplished with the assistance of qualified legal counsel. The intent is to ensure that the legal ramifications of any alternatives being considered are fully disclosed.

ECONOMIC DEVELOPMENT ELEMENT

Introduction

The Economic Plan Element evaluates the economic, employment and income trends and projections in the municipality comparatively with those of Monmouth County and the State of New Jersey. The strengths and weaknesses of the local economy are then evaluated in order to identify areas in need of improved land development, traffic patterns, infrastructure and design elements in order to maintain and enhance the stability and diversity of the Borough's economic structure. This economic plan discusses the most pressing concerns of the Borough's residents, identifies strategies and recommendations on how the community can improve its capacity to grow and develop economically, socially and culturally, while maintaining the characteristics that make the Borough of Spring Lake a great place to live, work and play.

Many aspects of economic development, including the regional labor force, the availability of private sector financing and market demand, are clearly beyond the control of the Borough. Other aspects are under the Borough's jurisdiction, most notably the zoning regulations, which control how much land is available for commercial use and at what density. The Borough also provides and directs spending for roadways and other physical infrastructure to support local businesses.

The economic plan draws upon the other elements of the master plan, particularly land use and circulation, to implement the economic objectives which are targeted at retaining and supporting the existing base while also providing opportunities for reasonable expansion and the introduction of new businesses. There are two overall themes that the economic plan seeks to address:

Direction and Clarity – Develop a plan by identifying areas appropriate for any new and infill commercial development to avoid conflicts with neighboring residential neighborhoods and create a vision for the future of the downtown

Mobility and Access – The ease with which employees and customers can access a business can greatly influence the success or failure of a business or its initial decision to set up shop in a particular location. The ability to expand the road system through either widening or the creation of new roads is no longer an option. The issue of parking in the downtown and the role that the provision of adequate and accessible parking facilities will play through shared parking efforts, the acquisition of additional property and the like will be of paramount importance in the successful revitalization of the downtown. Access to and from parking and the encouragement of a pedestrian-friendly environment will be key to the future success of the downtown.

GOALS & OBJECTIVES

Goals of the Economic Development Element are as follows:

1. Continue to concentrate future retail and commercial development in existing retail and commercial zones.
2. Encourage the development and sustainability of a diverse mix of commercial uses and services appropriate to the needs of Spring Lake and current market conditions.
3. Provide multi-modal transportation systems to efficiently move employees, customers, and goods to and from destination points in Spring Lake.
4. Strengthen the vitality of existing commercial areas.
5. Enhance the visual design and aesthetic features of existing businesses to attract more consumers.
6. Develop parking strategies for both long and short-term parking needs within and proximate to the Borough's downtown.
7. Develop a Downtown Master Plan.
8. Encourage cooperation and cross marketing efforts between the Business Improvement District (BID) and the Chamber of Commerce.

Objectives of the Economic Development Element are to:

1. Identify and promote services and facilities that are necessary to support existing and future business enterprises.
2. Provide the necessary infrastructure to support business development downtown and throughout Spring Lake.
3. Capitalize on the downtown's assets and provide for an attractive, vibrant, and easily accessible downtown that will support quality business enterprises.
4. Review and, if necessary, update the Borough's' existing design standards for the RC Zoning District.
5. Undertake a comprehensive business inventory to identify any needs or issues specific to certain industry groups, establish an appropriate business mix, and identify gaps in available goods and services that could present additional business opportunities in the Borough.
6. Develop a streetscape design plan for Third Avenue to coincide with any future district improvements.
7. Promote pedestrian safety and activity in the Downtown by developing traffic calming measures (curb bump outs, cross walks, shade trees) to slow traffic in the business district.

8. Create a more synergistic relationship between Devine Park, Potter Park, and downtown by improving pedestrian and biking linkages between these and other destinations in the Borough such as the Train Station/Recreation Center, and the beach/boardwalk by improving the linkages between each.
9. Provide continued support to the Business Improvement District.

ECONOMIC AND EMPLOYMENT CONDITIONS AND TRENDS

Income

According to the 2000 Census of the Borough of Spring Lake, the median income of residents (\$89,885) was significantly higher than the median income for Monmouth County (\$64,271) or the State (\$55,146). In addition, the per capita income of the Borough of Spring Lake residents was \$59,445, while the Monmouth County per capita income was \$31,149 and the per capita income for all New Jersey households was \$27,006. Further, 44 percent of Borough of Spring Lake households earned \$100,000 or more, while 28 percent of Monmouth County and 21 percent of New Jersey households earned over \$100,000. A distribution of households by income for the Borough of Spring Lake and Monmouth County is presented within **Table 13, Households by Income**, below.

Table 13: Households by Income (%)			
Income (\$)	Spring Lake	Monmouth County	New Jersey
Less than \$10,000	5.1	5.5	7.0
\$10,000-\$14,999	1.4	4.1	4.7
\$15,000-\$24,999	3.9	7.8	9.2
\$25,000-\$34,999	8.3	8.6	10.0
\$35,000-\$49,999	7.8	12.5	14.5
\$50,000-\$74,999	14.9	19.2	19.8
\$75,000-\$99,999	14.7	14.4	13.5
\$100,000-\$149,999	19.9	15.8	12.7
\$150,000-\$199,999	7.3	6.0	4.3
\$200,000 or more	16.7	6.1	4.3
Median Household Income	\$89,885	\$64,271	\$55,146

The Borough of Spring Lake's economic base is for the most part typical of an older, traditional town. The local economy is focused primarily in and around the Borough's downtown area (both on and proximate to Third Avenue) as well as the smaller retail area adjacent to the rail stop in addition to general commercial located along the railroad between St. Claire Avenue and Brighton Avenue.

Population

Due in most part to the Borough of Spring Lake's built out nature, the New Jersey Transportation Planning Authority (NJTPA) does not anticipate large gains in population through the year 2030 as shown in **Table 14**. In fact, only a 90 person increase or 2.5% rise in population over this 30 year time frame is anticipated.

Table 14: NJTPA Population Projections				
Area	2000 Population	2015 Projection	2030 Projection	% Change (2000-2030)
Borough of Spring Lake	3,570	3,650	3,660	2.5%
Monmouth County	615,300	674,100	713,000	5.7%
New Jersey	6,311,000	6,916,200	7,619,200	10.1%

Employment Data

As identified in **Table 15**, the Borough is projected to lose jobs over the next decade according to the NJTPA. Unlike the projections for Monmouth County and the State of New Jersey as a whole, the North Jersey Transportation Planning Authority actually projects the total number of jobs in Spring Lake to decrease by the year 2015. It can be assumed that this is due in part because Spring Lake is a built out community with limited commercial development opportunities, unlike other municipalities of southern and western Monmouth County and New Jersey, where open land, zoning and infill sites are available.

Table 15: NJTPA Employment Projections			
Area	2005	2015	% Change
Borough of Spring Lake	1,210	1,190	-1.65%
Monmouth County	259,900	286,980	10.42%
New Jersey	4,104,224	4,444,081	8.36%

Source: North Jersey Transportation Planning Authority (NJTPA) 2005-2015 Employment Projections, Accessed: 11/13/07
<http://www.state.nj.us/dca/coah/mpo/employment.xls>

Most of the Borough's population aged sixteen (16) and older was employed in the civilian labor force. The total population aged sixteen (16) and older in 2000 was 2,873 and of those 874 men (68.0%) and 614 women (38.7%) were in the labor force. The number of unemployed in the labor force was 67, which amounts to an unemployment rate of 2.3% in 2000. 1,385 are not in the labor force.

The U.S. Census categorizes the employed civilian population ages sixteen (16) and over into six (6) occupation groups. The groups include Management/Professional; Service; Sales/Office; Farming/Fishing/Forestry; Construction/Excavation/Maintenance and Production/ Transportation/ Material/Moving Occupations. In 2000, the largest employed civilian group in Spring Lake was the Management/Professional group, which involved 53 percent of the employed civilian population sixteen (16) and over. This is slightly higher than the County, where 41.8 percent of the residents are employed in management, professional and related occupations. The next largest category is the Sales and Office occupation group that accounted for 29.6 percent of the Borough's residents. Similarly, 29.4 percent of the county's population is employed in this category. Service Occupations were also prevalent in the Borough and represent 10 percent of the workforce. The farming, fishing and forestry occupations had the lowest employment of any of the industry groups in the Borough, employing 0.0 percent of the residents.

Commute to Work

The majority of the workforce, 1,132 (81%) of those aged sixteen (16) and over in Spring Lake, commuted to work via car, truck, or van in 2000. Of the 1,132 people commuting, 86 (6%) carpooled. In 2000, 5.3 percent of Spring Lake's population used public transportation (8 used public bus, 61 took the train or subway). In addition 69 people (5%) walked to work, while 99 people (7.1%) worked from home. The number of residents who worked at home in 2000 increased to 99 from 85 in 1990, perhaps reflecting increased opportunities for "telecommuting" based on improvements in internet and telephone communication.

BOROUGH ECONOMIC DEVELOPMENT ENTITIES

Business Improvement District (BID)

Although the policies and goals of the 1974 Master Plan had economic impacts on several aspects of Spring Lake, including the Borough's B & B industry, as well as the downtown area along Third Avenue, no specific goals in terms of economic development were included in the original Master Plan or its following reexaminations. In addition, the most recent Master Plan reexamination (2001) notes that Spring Lake is a predominantly residential community and intends to remain as such. This information seems to suggest that Economic Development in general has not been handled as a very pressing matter in Spring Lake. However, the Borough's downtown has recently

experienced a transition, primarily due to real estate and other professional offices that have sprouted up over the past decade, as the Borough has continued to lose hotels and more diverse shops in the downtown area. The topic of economic development and the path the Borough would like to pursue through the future, especially on Third Avenue and the Borough's Bed & Breakfast/hospitality, is a very important component of this 2008 Master Plan update.

The Borough mobilized the 21 member Spring Lake Managed Business District Steering Committee, which met weekly over a six (6) month time period to decide on the best way to revitalize the downtown. Through the district plan, the Steering Committee recommended the creation of the district, an independent entity controlled by a management corporation to provide services and assistance to businesses. Subsequently, on June 23, 2007, Spring Lakes Council adopted a resolution that established a Business Improvement District along and proximate to Third Avenue, which comprises Spring Lake's downtown.

According to the ordinance that established the district, the management corporation in charge of the district will be spending the funds allocated towards the district on litter removal, landscaping, parking and rest areas. The Spring Lake BID can also organize special events, improve building exteriors and recruit new businesses. Additional tasks to be provided through the BID include a focus on the district's environment, measures to ensure that the downtown is easy to locate and navigate, and also possible signage or a gateway indicating that area which constitutes the downtown. Further, work would also be done in the areas of business recruitment, retention, and development.

In return, businesses in the Borough would have to pay a special assessment, with those in the Third Avenue area paying 7 cents on every \$100 of their assessed property value and those outside the downtown area paying half that amount.

The Business Improvement District (BID) is a public-private partnership in which property and business owners of a defined area elect to make a collective contribution to the maintenance, development and marketing/promotion of their commercial district. BIDs are grassroots organizations that are driven by community support and require legislative authorization by the local government in which it resides, in order to be established.

Services provided by the BID may include street and sidewalk maintenance, public safety officers, park and open space maintenance, marketing, capital improvements, and various development projects. The services provided by BIDs are a supplement to the services already provided by the municipality.

BIDs are funded through special assessments collected from the property owners in the defined boundaries of the district. Like a property tax, the assessment is levied on the property owners who can, if the property lease allows, pass it on to their tenants. In Spring Lake, all commercial property, including the RC and GC zones, restaurants, the few businesses scattered elsewhere in town, Bed & Breakfasts, and other lodging are all

assessed. Spring Lake's BID will work with government entities, business organizations, and community organizations to build collaborations that help Spring Lake to thrive as a wonderful place to live. It will also seek to coordinate efforts with organizations such as the Chamber of Commerce and the Community House to enable all community efforts to prosper.

The Borough of Spring Lake's inventory of businesses has been prepared in order to assess the mixture of businesses that can currently be found in the Borough, and also identify uses that perhaps are lacking, and other uses that are abundant in the Borough. The inventory of Spring Lake's businesses can be found in **Appendix A - 2009 Business Inventory**.

CHAMBER OF COMMERCE

The Greater Spring Lake Chamber of Commerce is an organization of businesses and individuals volunteering to bring forth their collective talents to advance the commercial, financial and civic interests of the area and to improve the "quality of life" for its citizens. Over 65 retailers and other businesses in Spring Lake and in the surrounding communities belong to the Chamber of Commerce. The Chamber provides a number of services to its members including publishing a directory, maintaining a web page, sponsoring meetings and publishes the Spring Lake Guide and Map, which is a color, fold-out guide containing detailed local maps and listings of local businesses.

ECONOMIC DEVELOPMENT AREAS

The Downtown

The Borough's Downtown is located in the center of Spring Lake, identified as the RC Zone and which is commonly referred to as the Third Avenue Corridor.

A successfully revitalized downtown business district in most communities is one that is clear about doing what it already does well, doing it with greater intention and with a plan. The downtown serves as a reflection of the Spring Lake community. While it is a focal point in Spring Lake, its fate is also interconnected with other business endeavors.

The revitalization of this portion of the community will be more a matter of incremental improvement and consistency than a quantum increase in activity, or use. Spring Lake's business district is currently underutilized and could easily accommodate enough incremental improvement to create a healthier business climate without adversely affecting the quality of life within Spring Lake. While the downtown is not in need of drastic changes, fine-tuning issues such as business owner communication/coordination, marketing, and recommendations suggested in this Master Plan provide the Downtown with a bright future.

The Managed District Steering Committee invested a significant length of time to develop a working vision statement that will serve to guide the Borough's efforts to

revitalize Spring Lake's downtown. The statement below was the product of a collaborative effort to inventory what is already positive about the downtown, survey the business community, and establish values upon which the revitalization efforts should be based.

Historic Spring Lake's captivating shopping district welcomes guests from around the world and residents alike with its small village graciousness and relaxed atmosphere. Nestled within the family friendly "Jewel of the New Jersey Shore," Spring Lake's shopping district provides world-renowned boutiques, unparalleled customer service, unique galleries, casual outdoor eateries, and fine dining experiences. Downtown is a short tree-lined walk from the soothing ocean waves and non-commercial boardwalk, charming B&B's and hotels, and an enchanting park surrounding a spring-fed lake. Cultural events, including the many fine performances at the historic Community Theater, enhance the Spring Lake experience. The magical atmosphere of Spring Lake makes it ideal for a memorable wedding, summer vacation, romantic weekend, or short retreat.

This vision statement becomes a commitment upon which revitalization efforts can reference.

The downtown area has retail/office storefronts at the street line, forming a solid retail wall (with minor exceptions such as parking and walkways), and parking both on the street and in municipal or private lots behind businesses. The mix of retail uses, as seen in **Table: 16** below, includes specialty or comparative goods (typically durable goods that are brought on the basis of price or quality), non-alcoholic eating and drinking establishments (restaurants, pizza parlor), and, to a lesser extent, professional office space. While the overall mix and quality of goods and services offered is fine, the downtown lacks a strong anchor or destination attraction that would encourage greater patronage. While many small downtowns in New Jersey communities no longer have a strong single retail anchor such as a department store, most of the successful ones have a series of retail shops or other service destinations – a supermarket, the municipal offices, a post office, the library, a theater or a transit hub (such as a train station). Spring Lake has a theater, the Spring Lake Community House, which is an important attraction adjacent to the downtown, but is typically frequented at night or weekends when many of the other stores are closed.

Table 16: 2008 Spring Lake Business Inventory Breakdown		
Type	Number	% of Total
Apparel	23	20.7
Bank	2	1.8
Florist	3	2.7
Food/Drink	14	12.6
Furnishings/Gifts	10	9.0
Government	1	0.9
Inns	18	16.2
Medical	2	1.8
Non-Profit	1	0.9
Other	5	4.5
Personal/Beauty	5	4.5
Professional	5	4.5
Real Estate	14	12.6
Total	111	100%

At the same time, the downtown, with a blend of single and two-story buildings and the limited pedestrian presence at night time, represents an underutilization of prime real estate, and does not provide for a lively, on-the-street presence on weekday/weekend evenings.

Beachfront

Along with its downtown, tree lined streets and classical homes, Spring Lake is known for its connection to the waterfront, which is an attraction for residents in Monmouth County, and the residents of New Jersey, New York and Pennsylvania. Spring Lake maintains approximately 54 acres of beachfront bordering the Atlantic Ocean. Unlike many of the other surrounding shore communities, Spring Lake does not maintain a significant commercial presence along its ocean front. The primary attractions along the beach are the north and south beach pavilions. While the beach does not have an obvious economic effect besides the collection of seasonal beach badges and the pavilions, there is an indirect economical draw. The beach brings visitors and tourists into the Borough and is a significant reason for people choosing to live in Spring Lake either year-round or

seasonally. The Borough should look to capitalize on this opportunity and make additional efforts to “capture” visitors and promote the commercial, retail, and eating establishments that the Borough has to offer. The idea is to make it easier or more enticing to utilize the services Spring Lake has to offer rather than going along Ocean Avenue to another municipality.

Spring Lake’s B & B’s (Bed & Breakfasts)

A major consequence of the Borough’s 1974 Master Plan was the Borough’s policy towards Spring Lake’s Bed & Breakfast establishments. The policy stated “as the profitability of the hotels, to both the owners and the Borough, continues to decline, it has become advisable to determine alternative land uses of the subject land” and “it is proposed that any redevelopment within the R-3 District resulting in the demolition of existing hotel structures be limited to single family or town home development”. As economic conditions and the value of land continue to push these establishments to the brink of economic infeasibility, the Borough is faced with difficult decisions as to whether to consider legislative actions that would help preserve Spring Lake’s B&B’s or if their slow decline and ultimate demise will engender a new and perhaps better opportunity for the Borough’s economy.

Train Station Area

The train station is a general term for the area and uses around the New Jersey Transit rail station, which is located in the GC-General Commercial District along the western boundary of the municipality. The permitted existing uses are similar in nature to those permitted in the adjoining municipality of Spring Lake Heights, which are commercial, office and retail uses, surrounded by medium density housing. The Land Use Element of the Master Plan further discusses the alternatives for economic development in the area.

RECOMMENDATIONS

1) Design Standards

Through additional design standards, a historic preservation, or greater enforcement of existing design standards, the community can ensure that any future redevelopment in the downtown is fully in tune with the scale, architectural styling, and use that has defined Spring Lake’s downtown for over a century. The Third Avenue Business corridor features a number of different architectural features that the Borough is interested in preserving.

The viability of the downtown is dependent on the type of uses and compatibility of uses to be located within the area. As such, the Borough of Spring Lake is encouraged to examine the existing design guidelines that have been established for the RC Zoning District. The RC district ensures that the refurbishment of existing

buildings as well as the development of new structures along this corridor is in line with the Borough's vision for downtown. It is recommended that the Borough examine its existing ordinance to ensure that the provisions that have been adopted within this zone minimize the impact of new development such as parking, traffic, noise, illumination, smoke and odors, to the maximum extent practicable and to encourage the development of revised design guidelines.

2) Informational Kiosk/ Visitors Center

Members of the Spring Lake community have stressed the need to create a more synergistic relationship between Devine Park, Potter Park, and downtown, with the goal to improve pedestrian and biking linkages between these and other destinations in the Borough. These destinations include the Train Station/Recreation Center and the beach/boardwalk.

To better inform and guide both visitors and residents in Spring Lake, it is recommended that the Borough, the BID and the Chamber of Commerce consider providing informational kiosks at a) Devine Park, b) the Train Station c) the beach pavilions, and d) the downtown, to inform the community of public events, business specials, etc. The information kiosks are the opportunity to provide an attractive map of the community identifying key points of interest and how to reach them. Kiosks can be used to identify current programs being run by the Borough or approved groups.

The Borough has recently secured grant funding for the preparation of a plan to rehabilitate Spring Lake's old First Aid Squad building. Following this rehabilitation, the Borough is considering several options for the use of this facility, including additional storage space, a new home for the American Legion facilities, and a visitors/rest center for residents and visitors that are frequenting the Third Avenue area.

In conjunction with the Third Avenue BID, the Borough should review accessory and supporting community facilities and structures such as bathrooms and travel/visitors notification facilities that will be necessary in order to support the existing and future business enterprises within Spring Lake.

3) Parking

The loss of parking over the years in Spring Lake is well documented. Parking requirements that are currently in place in and around the downtown are so exorbitant that it is not feasible for any development applications to meet them. As such, it is recommended that Spring Lake review its ordinance to provide more responsive parking provisions. The Borough should consider targeting for acquisition parcels in and around the downtown for the provision of additional parking. The Borough can promote shared and linked parking between businesses in the downtown area to more fully and efficiently utilize the Borough's existing parking stock both on and proximate to Third Avenue. The Borough may also develop a parking fee ordinance

by which any new proposed development that cannot meet the standards of the parking requirements would be required to provide a monetary fee to a parking fund subsidizing future parking improvements.

As is the case in many small downtowns, merchants and their employees often occupy the best parking spaces, leaving less convenient spaces further away to potential customers, thereby discouraging customers from making short, convenience-oriented trips into the downtown. It is recommended that the Borough explore the possibility of designating a limited number of employee parking areas or spots in the downtown either for the entire year or during times of high holiday volumes.

The Borough of Spring Lake should consider creating a Parking Advisory Committee that would be specifically charged with addressing this issue and formulating a plan to resolve the Borough's parking over the coming years. This Committee would review the Borough's current inventory, and target additional lots proximate to Third Avenue to expand additional parking for customers, employees and downtown residents.

It is recommended that Spring Lake complete a full and comprehensive parking study in order to formulate a plan that will provide adequate parking for patrons, residents and employees of businesses in the downtown area.

It is recommended that the Borough examine the feasibility of installing parking stall management machines throughout the Borough as a means of collecting funds for public improvements. Parking meter stations may go hand in hand with the development of a residential parking permit program.

4) Expanding Range of Commercial Businesses/Services

As identified through the creation of the BID and subsequent meetings with the stakeholders, the strongest push for businesses on Third Avenue centers on food, with specific recommendations that the community add restaurants and a bakery as a priority. In conjunction with additional restaurants, it is recommended that the Borough investigate the opportunity for liquor licenses to encourage that type of establishment in the commercial center.

5) Historic Tours

Examine the feasibility of creating historic tours through the downtown, the Bed & Breakfasts, and other historic landmarks in Spring Lake that can help market the unique elements that make Spring Lake so special.

6) Develop a Streetscape Plan

It is recommended that the Borough of Spring Lake, with input from the Business Improvement District (BID), develop a comprehensive streetscape improvement plan

to focus on the development of gateways, traffic calming devices, street trees, way-finding signage, paved crosswalks, the creation of pedestrian nodes and the update of sidewalks, pedestrian scale lighting and street furniture to enhance the downtown.

7) Update Sign Ordinance

It is recommended that the Borough review the current signage ordinance per its applicability and effectiveness for stores in the downtown. The Borough should consider signage revisions that could be incorporated through more specific design standards that may be considered by the Borough for the businesses located along and proximate to downtown, including better Borough wide wayfinding signage.

8) Improving Linkages

Create a more synergistic relationship between Devine Park, Potter Park, and downtown by improving pedestrian and biking linkages between these and other destinations in the Borough such as the Train Station/Recreation Center, and the beach/boardwalk.

9) Bed and Breakfasts

Consider revising the Borough ordinance regarding B&B's to allow Bed & Breakfast owners to make the structures more livable to the owner, while still operating as a B&B facility.

CIRCULATION ELEMENT

Introduction

The Circulation Element describes the movement of people and goods within and through the Borough. It examines the street network, sidewalks, and pathways that provide mobility for residents, commuters, and business owners. Travel patterns within Spring Lake reflect its location along the New Jersey Coastline, where traffic concerns may be significantly different during the peak summer months in comparison to the winter months, the quieter time of the year. To develop recommendations for future improvements to the circulation system, the existing transportation system must be assessed. This assessment is accomplished through an evaluation and update of information provided in the past master plans and re-examination reports. The Circulation Element describes the street networks, public transportation, railroads, and pedestrian networks, as well as recommendations for new connections.

GOALS & OBJECTIVES

The Goals of the Circulation Element are as follows:

1. Improve intersections or roadway segments through the implementation of creative engineering, traffic calming, and design techniques.
2. Preserve, expand, and upgrade pedestrian passageways in the Borough to improve linkages between neighborhoods, community facilities, parks, and open space.
3. Utilize traffic calming measures in areas of high pedestrian activity.
4. Create a more bicycle- and pedestrian-friendly environment in Spring Lake that provides a safe and viable alternative to driving.
5. Balance congestion issues with pedestrian safety and access, both in and around the Borough's downtown.
6. Maintain the Borough's roadways to ensure the highest level of safety for motorists and pedestrians in Spring Lake.
7. Reduce the amount of carbon emissions originating in the Borough through the promotion of alternative, non-automotive forms of transportation, like walking and bike paths.

The Objectives of the Circulation Element are to:

1. Improve circulation in the Borough by adding attractive signage directing motorists and pedestrians to downtown, community events, beachfront, parking, and community buildings
2. Support the local economy by providing for the efficient movement of people and goods within and through Spring Lake.
3. Utilize the Borough's Capital Improvement Program and solicit funding from the County, State, and Federal grant sources to commence with roadway, sidewalk, and intersection improvements.
4. Evaluate and implement methods of providing adequate parking to serve existing development and any future redevelopment in Spring Lake.
5. Provide for circulation improvements and parking policies that (a) support enhanced walkability throughout the Downtown Area; (b) make bicycling more practicable; (c) make parking in Downtown Area more user-friendly for shoppers, residents and workers; (d) make the best possible use of existing parking resources.

The Borough of Spring Lake is situated with 54 acres of beachfront on the Atlantic Ocean. Ocean Avenue, the only road in Spring Lake that is not under the Borough's jurisdiction, follows the shoreline in a north-south fashion connecting Lake Como to the north and Sea Girt to the south. In terms of general economic and development patterns, the extreme coastal portion of Monmouth County has historically been the most developed portion of the County and reflects an orientation to the New York/Northeastern New Jersey Metropolitan Area. Although many of these communities (including Spring Lake) originated as seasonal resort towns, they have transformed over recent decades to year-round bedroom communities. Among many other factors, this transformation has impacted the Borough's Circulation patterns. As such, the Circulation Element of the Master Plan seeks to inventory the Borough's circulation patterns, identify the most pressing current and future issues in terms of circulation, and formulate a plan of action to ensure that Spring Lake moves forward with any necessary changes.

In terms of circulation infrastructure, the Borough of Spring Lake is situated with a number of major roads and highways in close proximity. However, as all of the major highways are to the west of the Borough of Spring Lake, any major commercial and/or industrial development has taken place to the west as well.

These major Monmouth County highways (US/ Highway 9, the Garden State Parkway, New Jersey Routes 34, 35, and 71) are oriented in a north-south direction, enhancing the area's connection with both the northern New Jersey and New York metropolitan areas. This circumstance provides Spring Lake with easy access to these economic centers and thus raises the Borough's geographic location as a suburban community.

Aside from Ocean Avenue and First, Second, and Third Avenues, which run in a north to south orientation, many of the Borough’s East to West avenues are the most heavily utilized thoroughfares in Spring Lake, that transport residents and visitors from the major highways and local neighborhoods to the waterfront.

Figure 4, Circulation Map, illustrates the Borough of Spring Lake’s roadway classification system and recommended circulation improvements. A discussion of the roadway classification system and a brief description of the mode and function of each major roadway, defined by its classification, are included below.

The complete functional classification system has been developed around the hierarchy of movements as shown in **Table 17**.

Table 17: Functional Classification of Roads
Freeway/Expressway: Primary function is to serve through traffic and provide high-speed mobility. Access provided from major streets at interchanges. Limited or no access to abutting land uses.
Major Arterial: Intended to provide a high degree of mobility and serve longer trips than minor arterials. Principal function is movement, not access. Should be excluded from residential areas.
Minor Arterial: Interconnects and augments the major arterial system. Accommodates trips of shorter lengths. Operating speeds and service levels are lower than major arterials. Should be excluded from identifiable residential neighborhoods.
Collector: Provides both land access and movement within residential, commercial and industrial areas. Penetrate but should not continue through residential areas.
Major Collector: Primary function is to collect and distribute traffic between local streets and the arterial system.
Minor Collector: Primary function is to provide land access.
Sub Collector: Primary function is to provide inter-neighborhood traffic movement.
Local: Provide land access and can exist in any land use setting. Movement is incidental and involves travel to and from a collector facility.
Source: Transportation Land Development Institute of Transportation Engineers, 1988.

The two main shortcomings of the Functional Classification System (FCS) in an urban environment are that it does not consider other modes of transportation and does not consider roadway functions outside of access and mobility.

Access and movement are the two functions served by streets under the FCS. In urban environments, these are but two of many uses of the roadway. With respect to the lack of consideration of other road users, it is arguable that the hierarchy of movements on which the FCS is based is equally applicable to walking, cycling, public transit and the private motor vehicle. However, the facilities that would serve “main movement” for a motor vehicle are significantly different than the facilities serving the “main movement” for pedestrians. Generally speaking, the movement of motor vehicle traffic requires a smooth, direct and uninterrupted route and little in the way of amenities. In fact, clear

zones at the side of the road are preferable for safety and convenience. The movement of pedestrian traffic is influenced much more by “comfort.”

In terms of roadway function classifications, two different classifications (collector and local) exist in the Borough of Spring Lake and each performs a different function.

Arterial roads are used primarily for the quick conveyance of large volumes of traffic. Although no arterial roads exist within the boundaries of the Borough of Spring Lake, several arterial roads including State Highways 35 and 71 are proximate to the Borough and do effect the circulation patterns in Spring Lake.

Collector roads are roadways whose primary function is to connect inter-municipal traffic between the arterial roads and the local roads. Due to their functionality, collector roads are designed to accommodate considerable capacity. The primary collector roads within the Borough of Spring Lake are Ocean Avenue and First and Second Avenues. As it transverses the Borough along the shoreline in a north-south direction, Ocean Avenue collects traffic from the various east-west roadways across the Borough.

The other major collector road within Spring Lake is formed by a series of roads carrying intermunicipal traffic. To the north, Third Avenue provides a link with the Borough of Lake Como. Traveling south, the collector connection is maintained as Lake Avenue carries traffic around Spring Lake and connects with First Avenue. First Avenue then continues to the Sea Girt municipal boundary and carries traffic across Wreck Pond and into Sea Girt.

In addition, it is important to note that many local streets in the Borough perform a collector function between Spring Lake and the arterial roadways located to the west. These roads, which include Pitney Avenue, Ludlow Avenue and Warren Avenue, are primarily the local roads, which do not have termination points within Spring Lake, thus making them the most efficient means to travel in an east/west manner across Spring Lake.

Local roads are roads basically intended to serve adjacent land uses and to carry traffic from one collector road to another. They are intended to have termination points in or near the Borough so that they will not begin to form a network of roads, which can ultimately, serve as a collector function. In Spring Lake, the major portion of the street grid consists of local streets serving the residential land uses. However, rather than terminating at the Borough’s municipal boundary, this grid pattern logically extends to the Borough of Spring Lake Heights where a terminus point is reached at Route 71. Owing largely to the built out nature of the Borough, the local road network is effectively complete, although a few “paper streets”, which are unimproved right of ways listed on the Borough’s tax maps, do still exist in Spring Lake.

With the exception of Ocean Avenue, which is held under the jurisdiction of Monmouth County, all other roadways within Spring Lake are held and maintained under the Borough’s jurisdiction. Due to the predominance of roads under local jurisdiction, Spring Lake budgets annually for maintenance and improvements. However, this predominance

also allows for greater control over roadway improvements, physical enhancements and the like.

Public Transportation

Public transit is not only a necessity for the residents of the Borough and the surrounding communities for commuting to job markets in New York, Pennsylvania and throughout New Jersey; it also plays a pivotal role in supporting the influx of visitors in the summer months.

Rail Service

NJ TRANSIT operates the State's commuter rail network. The rail system features 11 lines in three divisions. Customers can transfer between all lines, except Atlantic City Rail Line, at the new Secaucus Junction station. (The Raritan Valley Line requires an additional transfer at Newark Penn Station). The Newark Division, which serves Spring Lake, includes the Northeast Corridor, North Jersey Coast, and Raritan Valley lines operating to and from Newark Penn Station, Hoboken Terminal, and Penn Station New York. The Northeast Corridor Line rail service and feeder bus service are designed for commuters to the New York/Newark Metropolitan areas. The NJ Transit North Jersey Coastline routes go through the Borough's NJ transit station located at Sixth and Warren Avenues'. As a result, the AM peak service is primarily northbound, while the PM peak service is primarily southbound.

The Borough of Spring Lake maintains 187 free parking spots around the Spring Lake Rail Station for residents and visitors.

NJ Transit Bus Routes

NJ Transit Route 830 transverses the Borough of Spring Lake along Third Avenue. The route runs from Asbury Park to Point Pleasant Beach, via Belmar, Wall, Sea Girt, Manasquan, and Brielle. Weekday and Saturday service is available to Point Pleasant Beach hourly between 6:35 AM and 4:35 PM. Return Service is available hourly from 7:35 AM until 5:35 PM.

Private Bus Service

There are two private bus companies that provide commuter bus service from Monmouth County. As is the case with the rail service, much of the bus service is oriented toward the New York/Newark Metropolitan area. Academy offers commuter service from the Point Pleasant Park-and-Ride terminal in Ocean County through the coastal communities of Monmouth County to the Port Authority Bus Terminal and Wall Street in New York City. Limited service is available on weekends. Frequent service is available during peak hours, and twice an hour during midday hours. Fares vary, depending on length of trip.

Other Forms of Public Transportation

Three taxi services are located either in Spring Lake or within one half mile of the Borough's municipal boundary. These taxi services offer yet another mode of transportation to the members of the Spring Lake community.

In addition, Monmouth County offers several para transit alternatives through initiatives such as the Shared Ride, Medicaid, Brokered Employment Transportation Services (BETS), and Work First New Jersey (WFNJ) programs. These services are available to members of the Spring Lake through a combination of contractors and Monmouth County Department of Transportation (MCDOT) staff drivers and vehicles. These programs are described individually below:

Shared Ride – This service requires that clients make a 24-hour advance reservation for shared ride multiple-destination service. Senior citizens (60 and over) and disabled residents of Monmouth County are able to request service to a destination within the service area, with priority given to medical trips and food shopping. Service is available Monday, Wednesday, Friday and Saturday between 8:00 am and 4:00 pm and Thursday evenings, 4:00 pm to 9:00 pm.

Monmouth County Division of Transportation Special Citizens Area Transportation (MCDOT SCAT) – This service requires clients who are seniors or persons with disabilities to make a reservation not more than 14 days in advance or less than 24 hours in advance. Transportation is provided for a variety of medical, educational, nutritional, and shopping trips.

FTA Section 5311 – This service is provided through a federal grant and is open to seniors and persons with disabilities as well as the general public. The area covered with that service is Roosevelt, Upper Freehold Township, Millstone and the Manalapan portion of Gordon's Corner Rd south. The service is available Monday through Friday from 9:00 am to 4:00 pm. Reservations are open not more than 14 days in advance and no less than 24 hours in advance.

Brokered Employment Transportation Services (BETS) - This service provides transportation feeder service to existing public transportation systems, or in cases where these systems are non-existent, a ride within a reasonable distance from home to the work site. Service is available between 6:00 am-12:00 am, Monday through Saturday.

Work First New Jersey (WFNJ) - Work First New Jersey (WFNJ) is the welfare reform initiative of the State of New Jersey in response to the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 federal welfare reform legislation. WFNJ was signed into law in March 1997, and was fully implemented in July 1997. The WFNJ program includes program components that are in addition to the federal requirements, in order to better encourage welfare recipients to move toward self-sufficiency through work. The program is available to current WFNJ participants who are working on or are

involved in eligible work activities. Service is available 24 Hours a day, Monday through Sunday.

Safety Issues and Road/Intersection Improvements

Spring Lake is faced with pressing traffic volume, pedestrian safety, and parking problems that demand a coordinated plan in order to resolve these issues. To this end, the Borough has initiated a number of traffic and parking studies, namely, on Ludlow, Warren, Passaic, Pitney and Church Avenues, as well as South Boulevard.

The outcomes of these studies have indicated that intersection improvements will be beneficial if not absolutely necessary in order to improve the circulation of both pedestrians and automobiles in the Borough. Upon completion, the Borough's Circulation Element will offer a comprehensive assessment of these issues and illustrate where improvements are most needed.

Overview of Intersection Improvements (Circulation/Traffic Calming)

- 1) Pedestrian/Side walking- safety and mobility improvements.
- 2) Traffic Calming and Congestion Management- Slow traffic speeds on the major east/west arterials through the imposition of roundabouts and/or raised/textured paving elements at intersections (similar to Belmar).

Funding Improvements

Prime locations for these improvements include intersections along the following roadways: Ludlow Avenue, Warren Avenue, Passaic, Pitney Avenue, Church Avenue, and South Boulevard.

Means to Fund Improvements:

- 1) **Municipally Funded:** Straight from the Borough's Annual Capital Improvement Budget, or as its own separate line item.
- 2) **Assess Residents:** Establish a local Special Assessment District (possibly all property owners whose lots front on intersection and/or roadway) to accumulate funds for the improvements.
- 3) **Assess developers:** Accumulate funds for improvements through imposing additional development impact fees upon developers who are completing projects (possibly on the same road) as an anticipated circulation improvement.
- 4) **Outside Funding/ Grant Support:** There are numerous grant alternatives at both the State and the Federal level that may be available for such improvements. State programs through the New Jersey Department of Transportation and the State's Office of Smart Growth are both possibilities for the Borough to submit

for grant funding once a conceptual design, and plan for circulation improvements has been established by the Borough. In addition, at the federal level, programs such as the Transportation Equity Act for the 21st Century (TEA-21) and the Congestion Mitigation and Air Quality Improvement Program (CMAQ) affords the Borough opportunities to seek additional funding support. However, federal grant application processes in and of themselves are time consuming and costly, so they are not frequently utilized for smaller scale improvements similar to those that are being considered in Spring Lake.

- 5) **Parking Fees** The Borough could fund projects through the development of a parking fees ordinance, which would acquire funding through parking meters or parking permits for the train station.

Provided below is a summary of the costs of some improvements that are being considered by the Borough to increase safety, calm the flow of traffic and also improve the overall circulation pattern in the Borough of Spring Lake. The following is a preliminary assessment by item of safety and circulation improvement measures that may be considered by the Borough:

Table 17A: Approximate Cost of Transportation Improvement Measures	
Item	Cost
Speed Bump	\$5,000-6,000
Curb Extensions	\$10,000-15,000
Roundabout	\$15,000-\$25,000
Decorative Intersection with Curb Extensions	\$30,000-60,000
Raised Intersection with Curb Extensions	\$50,000-100,000
Source: Monmouth County Planning Board Community Traffic Calming Study, June 2000	

Although Spring Lake does have a plan to address the need for parking during the peak summer season, mainly by restricting the locations where overnight parking is allowed, the master plan suggests a comprehensive parking study and inventory be prepared to further detail the Borough's needs. More specifically, these considerations are comprised of whether the current parking provisions along the Third Avenue Business District can accommodate the parking demands of the area as the complexion of the Business District changes to become more in line with the Borough's visions of a vibrant, yet small scale Main Street area. Also, the feasibility of adding traffic calming techniques will be examined, as it was included in the Ludlow Avenue and First Avenue traffic reports. Similar efforts have been successful in neighboring municipalities to reduce the speed of traffic on the main feeder streets that run in an east/west orientation to and from the beach.

The timely circulation of automobiles in the Borough also would be aided by additional wayfinding signs to orient pedestrians and drivers alike. The way finding signs will serve as an economic development tool as the Borough could incorporate more signage alerting

motorists of Spring Lake's Business District. As mentioned as a goal in the Conservation, Open Space, and Recreational Element, it is also recommended that the Borough pursue studies to examine the feasibility of creating additional pedestrian and multi-modal transportation linkages between the beaches, the Third Avenue Business District, and the Borough's lakes in order to create a more synergistic relationship between these features.

Recommendations for Improving Circulation in Spring Lake

Because the circulation of pedestrian and vehicular traffic affects the everyday function of society, the circulation recommendations stated below will be cross-referenced in many of the other elements of the master plan.

- 1) Address parking in and around downtown, not only in regards to circulation, but also from an economic development standpoint. Spring Lake is encouraged to promote shared and linked parking between businesses in the downtown area to more fully and efficiently utilize the Borough's existing parking stock on and proximate to Third Avenue. Agreements between property owners and businesses should be explored to determine if parking areas not utilized at night by one owner could be utilized by others during non-peak hours.
- 2) Calm traffic and improve both vehicular and pedestrian safety within Spring Lake by reviewing the feasibility of utilizing four way stop signs at intersections that have experienced a high rate of accidents or where speeding tickets have frequently been issued. (See #8 in this section for intersection list)
- 3) Complete a full and comprehensive parking study to formulate a plan that will improve parking for patrons and employees of businesses downtown.
- 4) Enhance connections between Devine Park, Potter Park, and the downtown. Improve pedestrian and biking linkages between these locations and other destinations in Spring Lake such as the Train Station/Recreation Center, the beach/boardwalk and Lake Como.
- 5) Consider creating a Parking Advisory Committee charged with addressing the parking issue and forming a plan to resolve it. The Committee can review the Borough's current inventory and the need to consider targeting additional lots proximate to Third Avenue for downtown customers, employees, residents, etc.
- 6) The Borough is encouraged to complete traffic calming and streetscape improvements in the downtown area (textured bumpouts and cross walks, shade trees, etc.) to slow traffic, improve safety, and make Third Avenue a more pedestrian and consumer friendly destination.

- 7) Provide wayfinding signs and/or gateways into the downtown area to notify people where it is, what it has to offer, and welcome them when they get there. A sign inventory should be completed to identify opportunities to compile signs together or remove redundant signage to eliminate signage clutter.
- 8) **Problem Intersections-** Following the public discussions with the Borough's staff, and a review of the Borough of Spring Lake's crash inventory for the last several years, the most pressing intersection improvements from a safety standpoint have been identified as:
 - Third Avenue and Pitney Avenue
 - Third Avenue and Ludlow Avenue
 - Third Avenue and Morris Avenue
 - Fifth Avenue and Warren Avenue
 - Third Avenue and Marucci park

Traffic calming at these key intersections would improve both pedestrian and motorist safety and reduce the number of potential accidents at these intersections.

- 9) Add and/or improve the existing sidewalks along the entire eastern side of Ocean Avenue to improve pedestrian safety and more formally connect the Avenue with other non-motorized trails throughout the Borough. The upgrading of sidewalks will also improve the ad hoc loading/unloading areas for vehicles carrying patrons of the Borough's two Pavilion facilities.
- 10) Examine the feasibility of adding a simple gravel/stone trail around the Spring Lake Borough side of Lake Como in order to improve non-motorized circulation patterns, expand recreational opportunities and reduce the number of geese that congregate at Lake Como. By naturally curtailing the number of geese that congregate in this area, such an initiative could also positively impact both Lake Como's fecal coliform and water quality issues.
- 11) There is a need in Spring Lake for shared parking arrangements and additional neighbor/owner coordination to maximize the potential of the Borough's existing stock of parking areas.

UTILITY PLAN ELEMENT

INTRODUCTION

Utility services play a critical role in shaping future growth for a municipality. The purpose of the Utility Service Plan Element is to ensure the existence of adequate infrastructure for the present and projected population of the Borough of Spring Lake, without adversely affecting the environment or the community's quality of life. Although the Utility Plan is not a mandatory Master Plan element, the Municipal Land Use Law (40:55D-28b (5)) describes the elements of a Utility Service Plan as follows:

A utility plan element analyzing the need for and showing the future general location of water supply and distribution facilities, drainage and flood control facilities, sewerage and waste treatment, solid waste disposal and provisions for other related utilities, and including any stormwater management plan required pursuant to the provisions of P.L.1981, c.32 (C:40:55D-93 et seq.).

This Utility Service Plan will review background data and assess current conditions to establish a baseline set of conditions for the utilities that are currently serving Spring Lake. This plan should be used as a general guide when determining the future needs and provision of utility services.

GOALS & OBJECTIVES

The Goals of the Utility Plan Element are to:

1. Assure the provision of adequate water supply for residential, commercial, industrial and firefighting usage;
2. Encourage public and private actions that will conserve the Borough's nonrenewable energy resources;
3. Promote and advance the integration of green technologies into the Borough's land use planning and building construction process.
4. Ensure an adequate Capital Improvement Program to maintain existing infrastructure and replace or modernize obsolete facilities.

The Objectives of the Utility Plan Element are to:

1. Plan for the necessary upgrading of the Borough's utility infrastructure to replace aging and obsolete systems and provide special attention to the upgrading and retrofitting of Spring Lake's storm and sewer lines.
2. Protect the integrity of the Borough's public water supply including storage, treatment, and distribution systems.

3. Encourage the development of high technology infrastructure including fiber optic data transmission lines, digital switching stations, telecommunication facilities and high-speed Internet access.
4. Continue to promote the underground installation of electrical, cable and other utilities to promote safety and aesthetics in Spring Lake. Wherever possible, avoid overhead utility line runs at streets by continuing the practice of placing these underground/under the street. Help to coordinate the planning and installation to promote shared use by as many utilities as practical.

SOLID WASTE DISPOSAL

Spring Lake Borough provides garbage and recycling pickup to both the residents and the businesses of the town. Solid waste pick up is done twice weekly, either Monday and Thursday or Tuesday and Friday, depending on street address. The Borough of Spring Lake provides curbside recycling collection on the second Wednesday of every month, unless otherwise specified on the online calendar. Items included in this collection are newspapers, bottles, and cans. Residents and businesses are responsible to sort the different recycling materials from one another as well as from the solid waste. The Borough also provides Bulky Items pick up, Clean Up pick up, and Tree Limbs, Hedges, and Shrubbery pick up. Bulky items include furniture, washers, dryers, hot water heaters, stoves, bed mattresses and box springs, carpeting, and similar items, which maybe be placed at the curb for pick up on specified days. Tree limbs, hedges, and shrubbery are also placed at the curb for pick up on specified days. The Borough provides leaf collection from October 17th through December 20th. Any material collected curbside, as well as recyclable items that are not picked up curbside, can be dropped off at the Reclamation Center located at Fifth and Salem Avenues. A car decal, obtainable from the Borough Clerk's office, is required to use the Reclamation Center. The recycling calendar is available online at the Borough website and in Borough Hall. The Borough, recommending that they be composted or left on the lawn, does not collect Grass clippings and other vegetation not already specified. Disposal of refrigeration appliances such as air conditioners, dehumidifiers, or freezers requires that the Borough Clerk's office be contacted. The Borough does not collect hazardous, chemical, or construction materials, tires or paint. For more information regarding Spring Lake Borough's extensive recycling plan, see the Recycling Plan Element of the master plan.

WATER SERVICE

The source and capacity of the Borough's potable water supply has changed dramatically since the 1974 Master Plan was conceived. The 1974 Master Plan called for the provision of alternative public water supply, as the Englishtown aquifer, which served as the Borough's sole water supply source in 1974 had limited capacity.

Presently the Englishtown Aquifer system supplies the Borough with approximately 75% of its potable water supply. This system crops out in the western part of the New

Jersey Coastal Plain in an irregular band that extends from the Raritan Bay to Delaware Bay, adjacent to Salem County. The Englishtown aquifer system acts as the single aquifer throughout most of the Monmouth and Ocean County region. In addition, the remaining 25% of the Borough's water supply is obtained, primarily during the summer months, from the Manasquan Reservoir system. Spring Lake Borough began utilizing the Manasquan Reservoir in the summer of 1990. Further, in their 2003-2004 Water Supply Action Plan, the State's Department of Environmental Protection indicated that the construction of the Manasquan Reservoir had provided the Manasquan River Watershed with a surplus of potable water. As part of the overall distribution of water from the Manasquan System, the Monmouth County Improvement Authority entered into a contract with the New Jersey Water Supply Authority to construct and operate a 4 million gallon-per-day water treatment plant and potable water transmission system. The Manasquan Water Treatment Plant now provides 60% of the potable water consumed by the communities of Brielle, Sea Girt, Spring Lake, Spring Lake Heights, and Wall Township.

SANITARY SEWER

The Borough of Spring Lake's sanitary sewers are maintained and the 1974 Master Plan and subsequent reexaminations also indicated that the Borough's sewer treatment system was in need of upgrading. The original sanitary sewer lines are now approaching 100 years of age. The Borough's Public Works Department has been working to resolve the issue of the ageing infrastructure through a program of replacement or lining of the old pipes.

The Southern Monmouth Regional Sewerage Authority (SMRSA), which services the municipalities of Belmar, Brielle, Lake Como, Manasquan, Spring Lake, Spring Lake Heights, Sea Girt, and a large portion of Wall Township, maintains two pump stations in the Borough of Spring Lake (at 300 Ocean Avenue & Pennsylvania Avenue and South Boulevard, aka the Pitney Avenue site). The Ocean Avenue site maintains an average flow of 400,000 GPD, while the South Boulevard station maintains approximately 100,000 GPD. The daily flows for each facility are then transferred to the SMRSA main treatment facility located on 18th Avenue in Wall Township.

For the year 2007, Spring Lake maintained a combined flow of approximately 224,905,000 gallons per year. While both pump stations maintain more than enough capacity, the limiting factor is the permitted allocation from the SMRSA. Spring Lake has a yearly allocation of 240,000,000 gallons. Given the yearly flows of 224,905,000 for 2007, Spring Lake does not have any allocation capacity concerns. In fact SMRSA intends to re-distribute its allocation capacities for the municipalities in 2009, which would give Spring Lake a new allocation of 285,000,000 mgpy, an increase of 40,000,000 mgpy. This is significant if any infill development is proposed in the Borough.

SMRSA is currently working on a pilot program with Wall Township in which any applicant before the Planning Board is required to meet first with SMRSA for an initial

approval. This allows the Authority to analyze the capacity on a site-by-site basis. In 2009, SMRSA hopes to expand this program to other municipalities, including Spring Lake.

DRAINAGE & FLOOD CONTROL

Spring Lake has experienced flooding problems in recent decades, with serious flooding taking place in March of 1992 and October of 2005. As a result, the Borough has undertaken several additional emergency management preparedness initiatives to ensure that emergency staff is fully prepared to carry out management of a flood or other natural disaster in Spring Lake.

The Borough has participated in pursuing flood mitigation measures such a dredging, upstream floodwater diversion and emergency deluge pumping in cooperation with Monmouth County, the State, and the Army Corp of Engineers. In addition, Spring Lake has completed a comprehensive overview of its stormwater management policies and practices, and set forth a plan for the maintenance and improvement of these items within its Municipal Stormwater Management Plan (MSWMP).

In addition to assessing flood prone areas and locations with poor drainage, the Borough's MSWMP reviewed its existing stormwater management ordinances and, in turn, provided preventative and corrective maintenance strategies to ensure the long-term effectiveness of its stormwater management infrastructure. The plan also outlined safety standards to be implemented for Spring Lake's stormwater management infrastructure in order to protect public safety. Finally, the Borough's MSWMP includes a mitigation section that provides specific stormwater management measures to which prospective developers (when deemed applicable by the ordinance) may contribute. Alternatively, prospective developers may complete stormwater management mitigation projects, which have been identified by the Borough in order to protect water quality, water quantity, and groundwater recharge within and around Spring Lake.

As Spring Lake is an older, established community with very few undeveloped lots, there is little expectation that future development within the Borough would impose a large increase in stormwater runoff volumes, or pollutant loads on the Borough's waterways.

ELECTRICITY AND NATURAL GAS SUPPLY

In Spring Lake, as in many established communities within the United States, electricity and natural gas were traditionally supplied solely by quasi-public companies that had monopolies on the generation of electricity, the supply of natural gas and the transmission and distribution of both. In 1999, the New Jersey State Legislature passed a law permitting competition in the electricity and natural gas generation/supply markets. Currently, in Spring Lake, transmission and distribution are handled by Jersey Central Power & Light and as NJ Natural Gas.

WASTE/ENERGY MANAGEMENT

As fossil fuels and other natural resources continue to be extracted and utilized beyond their sustainable yield, both public utilities infrastructure and the energy supply must be examined as part of any master planning effort. Spring Lake and Monmouth County have been at the forefront of innovation, as evidenced by the success of waste level reductions associated with the recycling program. However, it is imperative that green technologies be incorporated into future development projects and renovations to push them closer to an environmentally sustainable level.

There are several alternative sources of energy that could be incorporated as “green design” into new development. While it is important that buildings be well insulated to maintain efficient use of gas and electric heat in colder months, solar panels on the south-facing roof pitch of residences and office buildings can provide enough supplemental heat so that thermostats can operate at lower temperatures. Conversely, planting hardy, sun-tolerant grass, shrubs and trees on the rooftops of buildings can help cool down a building during the summer months and reduce costs associated with air-conditioning.

RECOMMENDATIONS

1. Develop an initiative to expand on the Borough’s existing program to upgrade the entire stock of sewer lines by lining/replacing the existing terra cotta pipes.
2. Establish a Development Fee Ordinance to cover the cost of sanitary sewer and stormwater upgrades, facilities and maintenance for new developments within the Borough to ensure that the capacity of existing infrastructure is not exceeded or negatively impacted by additional development.
3. Investigate the potential for securing additional County and State funding for utility improvement projects such as the ongoing Stormceptor improvements to various storm sewer inlets.
4. Continue to utilize any and all resources to aggressively pursue appropriate support and funding to minimize the impact of potential flooding.
5. Provide for the alleviation of existing stormwater management and flooding problems through the implementation of both structural and non-structural Best Management Practices (BMP’s) on new developments. Incorporate these principles when retrofitting existing stormwater basins.
6. Continue to improve and expand the existing resource recycling programs.
7. Locate all community-wide or regional drainage and flood control facilities and ensure Borough compliance with the County Master Plan.

8. In order to encourage public and private actions that will conserve the Borough's nonrenewable energy resources, it is recommended that the Borough expand on the educational programs such as the recent "Plant a Bulb" program and the ongoing Utility Company energy saving programs that are accessible through the Borough's website and also through "The Bridge" (Spring Lake's quarterly mailer that is distributed to all residents).
9. Promote and advance the integration of green technologies into the Borough's land use planning and building construction process. Spring Lake should consider additional ordinance revisions (like those developed for impervious coverage and recharge systems) and provide information on the Borough's website and in "The Bridge" concerning sustainable concepts such as low maintenance shade plantings, rain gardens, and gray water irrigation.
10. The Borough has participated in pursuing flood mitigation measures such as dredging, upstream floodwater diversion and emergency deluge pumping. The various agencies include the County, the State, and the Army Corps of Engineers. Moving forward Spring Lake should continue to utilize any and all resources to aggressively pursue appropriate support and funding to minimize the impact of potential flooding. The Borough is encouraged to continue to expand these initiatives as necessary to ensure that Spring Lake is fully prepared for any natural hazards and emergencies that may arise.
11. Minimize the utilization of street utility poles by requiring underground utilities where applicable and encourage the use of shared utility poles.
12. Inspect the existing, non-operational wastewater tanks located along Ocean Avenue to determine their feasibility for use in stormwater management, water quality or detention.

COMMUNITY FACILITIES PLAN ELEMENT

INTRODUCTION

Community facilities are those buildings and services that provide support to the general public. Although community facilities are often provided by public entities, many times private and semi-private organizations also offer services to the general public. The Borough has a low crime rate, quality educational facilities programs, and luxury senior housing. Spring Lake's community facilities include police, library, fire and emergency volunteer services, municipal complex and the Department of Public Works (DPW). The intent of this element is to offer recommendations to maintain and improve upon the existing facilities to address the future needs of the municipality. Community Facilities are identified on **Figure 5**.

GOALS AND OBJECTIVES

The Goals of the Community Facilities Plan Element are to:

1. Maintain the existing system of community facilities in order to preserve the current standards for public services, and provide new facilities where necessary to accommodate growth as well as the changing needs of the population.
2. Ensure an adequate Capital Improvement Program (CIP) to maintain existing infrastructure and replace or modernize obsolete facilities.
3. Provide for a continuity of services under emergency conditions.
4. Advocate the use of Sustainable Design and the Leadership in Energy and Environmental Design (LEED) Green Building Rating System for the construction and renovation of public buildings and parks in the Borough of Spring Lake.
5. Coordinate Borough planning efforts with the Spring Lake Board of Education to promote the most efficient utilization of the Borough's educational facilities.
6. Upgrade the Borough's infrastructure, as necessary.

The Objectives of the Community Facilities Plan Element are to:

1. Maintain and upgrade existing emergency service facilities (especially those facilities that are aging or obsolete) and plan for new facilities as necessary to improve the effectiveness and efficiency of service.
2. Maintain streets, parks, benches, police and fire protection, recreational programs and other services sufficiently to meet the needs of Spring Lake residents and business owners.

3. Evaluate existing facilities to identify opportunities to improve efficiency, maximize utilization, and minimize operating costs to avoid the need for additional space.
4. Improve public awareness of the availability and access to community facilities to improve public service and facilities utilization.
5. Continue to maintain and update equipment used by emergency personnel.

SPRING LAKE'S COMMUNITY FACILITIES

An inventory of Spring Lake's community facilities includes: the Municipal Building, the Borough's two fire stations, the Police Department building, the HW Mountz School, the St. Catharine's Elementary School, the Community House, the Spring Lake Public Library, beach pavilions, and the Borough-owned lots. As indicated in the Goals and Objectives, it is imperative that Spring Lake plan for the maintenance and upgrading of public facilities and, to assist in that effort, an overview of the conditions of each of the Borough's community facilities follows.

Municipal Building- The Borough of Spring Lake's municipal building, located at Fifth & Warren Avenue, was built in 1897 as the town's first public school. In addition to housing Borough administrative offices and council chambers/courtroom, the building is home to the Spring Lake Historical Society. The facility is an unusually elaborate and ornate space that served in the 1950's as a Masonic meeting room. The building is currently in satisfactory physical shape, however, alternative means to free up additional space for storage, such as scanning older documents and files to save inventory space should be considered. When the Old First Aid Building is renovated and expanded it is anticipated that the American Legion will relocate there providing an opportunity to obtain approximately 700 square feet of space in Borough Municipal Building.

Recycling Station- The Recycling Station located at the Public Works Facility at the corner of Fifth and Salem Avenues is a very important and successful component of Spring Lake's community facilities. Sufficient capacity appears to exist. However, there is an issue regarding the frequency of use that the facility experiences from patrons that live both within and outside the Borough of Spring Lake.

Fire Stations- The two fire department facilities appear to be in good physical condition as Fire Station One on Fifth Avenue between Passaic and Warren Avenues was recently expanded and substantially renovated. The other Fire Station shares the building on Washington with the Police Department.

Police Department Building- During the warmer months, patrons of stores along Third Avenue frequently ask to use the police buildings bathroom and changing facilities. The Borough should review the need for additional restroom facilities within the downtown area.

HW Mountz School- The school experiences a steady enrollment and contains enough extra capacity to meet the needs of additional students should an unanticipated influx of students enroll at the school in the future.

St. Catharine Elementary School- Similar to the H.W Mountz School, St. Catharine's appears to have steady/strong enrollment, which is discussed further on in this document.

Old First Aid Building- This facility, which is located just west of the intersection of Third Avenue and Washington Avenue, has remained vacant for some time. The Borough has secured grant funding to rehabilitate this structure. The Borough is considering several options for the use of this facility. The options include: additional storage space; a new home for the American Legion facilities, a visitors/rest center for residents and visitors that are frequenting Third Avenue. This area can be utilized to distribute Spring Lake educational materials and historic memorabilia. These alternatives will be developed further as the plan for the rehabilitation of the structure progresses.

New First Aid Building- The Borough of Spring Lake has recently constructed a new First Aid building, which is located on 313 Washington Avenue (just east of the Police Department building) and is in very good condition.

Spring Lake Community House, Public Library and Theatre- Spring Lake's Public Library, managed and funded by the Borough, is housed within the Community House building located at the northwest corner of Third Avenue and Madison Avenue. The house was given to Spring Lake's citizens by O. H. Brown but is governed by a non-profit Board of Trustees managed by an Executive Director, and is not owned by the Borough. The feasibility of updating, upgrading, and/or expanding this facility should be examined by Spring Lake. The building also houses the Community Theatre and Dance School, which has been occupied by the Spring Lake Theatre Company from 1978. The theatre, renovated in 1986, has a seating capacity of 350. The Spring Lake Theatre Company produces musicals, comedies, and dramas, with professionally talented casts, lavish sets and costumes. Each year the Company puts on six different shows per season, with the opening night ticket sales of each donated to charity. Over 200 local families are assisted through this holiday outreach program each year. The Dance School program teaches ballet, modern dance and other styles of dancing.

Affordable Housing- The approved affordable housing project (located proximate to the intersection of Warren Avenue. and Railroad Avenue) was purchased by the Borough .The proposed building will offer four low and moderate-income units in compliance with the Borough's affordable housing obligation.

Spring Lake Train Station Recreation Center-A portion of Spring Lake's train station has recently been renovated and renamed the Spring Lake Train Station Recreation Center. This multi-use public building will be used for Borough activities

and programs for seniors, children and other interested parties. The facility has new bathrooms and has been retrofitted to comply with ADA requirements.

Beach Pavilions - The Borough of Spring Lake maintains two beach pavilions: the South Pavilion, adjacent to the beach between Atlantic Avenue and Salem Avenue and the North pavilion, adjacent to the beach, at Ludlow Avenue. Further details are provided in the Conservation, Open Space and Recreation Element.

EMERGENCY SERVICES

Spring Lake Police Department

During the warmer months, patrons of stores along or proximate to Third Avenue frequently use the police building's bathroom and changing facilities, indicating a need for additional facilities within the downtown itself.

The Police Department is a fully staffed, 24 hour/ 7 day-a-week operation. Its mission is to provide quality, professional police protection and services through a strong, integrated relationship with the community. The policing strategy of the department is that of proactive policing through community involvement. The department currently maintains

- 14 full-time, sworn officers including 1 full-time detective
- 12 - 15 seasonal Class I & II Special Officers
- 8 civilian employees
- modern police / fire Complex

All emergency communications for Police, Fire and First Aid are handled by four full time and three part time dispatchers who also provide services for Spring Lake Heights pursuant to an Interlocal Shared Services Contract. The Police Department utilizes an array of equipment to provide quality services to the community:

- Police Cruisers
- 4-wheel drive sport utility vehicles
- All Terrain Vehicles (ATV)
- Police Bicycles
- Zodiac Rescue Boat
- Jet Ski Water Rescue Craft

Additional programs that operate under the auspices of Spring Lake's Police Department include:

DARE Program - Drug and Alcohol Resistance Education, an early intervention program taught in both elementary schools.

House Closing Registration - For residents who may be leaving their house unoccupied for an extended period of time. Information is left with the police department regarding contacts, alarm, lighting, vehicles, etc.

Ident-a-Kid Program - provides parents with a photograph and records personal information for children in case a child becomes lost or missing.

Operation Senior Line - program that enables senior citizens in the Spring Lake community to telephone the police department on a daily basis in an effort to ensure their well-being and safety. Officers make visits to the seniors if a call is not received.

Crime

Tables 18 and 19 depict the number of property crimes and violent crimes in Spring Lake as compared to state and national statistics. The Federal Bureau of Investigation (FBI) estimated in 2006 that for every 100,000 inhabitants, 2,091 property crimes occurred in New Jersey and 3,334 occurred in the nation. Spring Lake property crimes totaled 80, well below the state and national average. There were no violent crimes reported in Spring Lake in 2006 compared to the rate of 351.2 violent crimes in the state and 473.5 in the nation. While extremely low, larceny/theft and auto theft accounted for the largest percentages of crimes in Spring Lake.

Table 18: Property Crimes Reported in 2006			
Crime	Spring Lake	per 100,000 in NJ	per 100,000 in U.S.
Burglary	5	452	729.4
Larceny/Theft	68	1556	2206.8
Auto Theft	7	283.4	398.4
Totals	80	2091.4	3334.8

Robbery	0	153.1	149.4
Aggravated Assault	0	179.4	287.5
Totals	0	351.2	473.5
Source: 2006 FBI Offenses Known to Law Enforcement			

Fire Departments

The Spring Lake Fire Department is comprised of two fire companies, both of which are volunteer organizations supporting a total of 70 volunteer firefighters. The department maintains one aerial ladder truck, four pumper trucks, one light rescue truck and one chief's car.

Fire Company No.1, located at 1007 Fifth Avenue, was the first fire company to serve the residents of Spring Lake and neighboring towns. Fire Company No. 1 held its first regular meeting on Nov 11, 1890 and meetings are still held at the company on the 1st Thursday of every month at 8PM. What makes Fire Company No. 1 unique is that the members own maintain and insure the firehouse, as well as owning 2 of the 3 fire trucks housed at the station. These purchases were made possible by the generous donations from the residents and businesses over the past 108 years. To date, Fire Company No 1. is still manned solely by volunteers.

Spring Lake Fire Company No. 2 (Goodwill Fire Company), located at 311 Washington Avenue, was organized in December 1901. F.W. Newman was the first chief.

In terms of future planning, each facility is well maintained and the fire equipment is kept up to date with the help of donations to each organization. The most important issue is that each squad attracts a sufficient amount of fire fighters to serve the Borough of Spring Lake. Should this trend continue, the Borough may consider consolidating fire emergency services with one or another of Spring Lake's surrounding municipalities.

Spring Lake Office of Emergency Management (OEM)

The Spring Lake Office of Emergency Management (OEM) has initiated several new emergency warning capabilities to provide timely information to Spring Lake families. An AM broadcast station (1640 AM) airs NOAA weather information updates daily and will include emergency warning messages when necessary. The Borough also has installed an emergency siren with loudspeaker capability.

A major addition to the warning system is Reverse 911. This capability (called Code Red) enables the Borough to provide emergency message calls directly to local phones. Emergency messages can be sent to the entire town (in the event of a hurricane, for example), to sections or blocks within the town (as a flood warning to residents living near one of the lakes, for example) or to special groups of residents (e.g., school families in the event of a school closing).

Spring Lake First Aid Squad

The Spring Lake First Aid Squad was founded in 1928 and is located at 313 Washington Avenue. The squad's primary response area is Spring Lake and Spring Lake Heights, with a secondary response area including area towns. The Spring Lake First Aid Squad was the second established volunteer squad in the United States, with the neighboring town of Belmar being the first. The Spring Lake squad currently contains 25 members, and the Community Facilities Map (**Figure 5**) shows its location.

SPRING LAKE EDUCATION

The Spring Lake Board of Education maintains one public school serving local students from kindergarten through eighth grade, the H.W. Mountz School. Graduates of H.W. Mountz School are assigned to Manasquan High School as part of a sending/receiving relationship; otherwise, students may attend one of the magnet schools in the Monmouth County Vocational School District such as The Marine Academy of Science and Technology (MAST), Academy of Allied Health & Science, High Technology High School, Biotechnology High School, or Communications High School.

In 1897, the town's first public school was built at the corner of Warren Avenue and Fifth Avenue. Later, the building housed a Masonic Lodge and the school ultimately relocated to Tuttle Avenue. On May 10, 1962, the Spring Lake public school was renamed to honor its retiring principal, H.W. Mountz. The school had a 2007-2008 enrollment of 253 students, with an average class size of 17 students. **Table 20** compares the total number of students enrolled in the school district for the years of 1998/99 through 2007/08. Total enrollment has steadily decreased since the 1998/1999 school year with one exception: the 2001/2002 school year. This trend is contrary to those of school districts throughout the State of New Jersey, where development has pushed school occupancy to its limits. In fact the H.W. Mountz Long Range Facility Plan indicates a capacity to hold 331 students, which is room for 78 more students than are currently enrolled. While school aged children increased 17.4% over the past ten (10) years the overall decrease in school registration may indicate children are attending private school such as St. Catharine's or may also lend itself to the fact that many of Spring Lake's homes are summer homes for people and their children are not attending school in town.

Table 20: H.W. Mountz School Enrollment, 1998-2008										
Year	98-99	99-00	00-01	01-02	02-03	03-04	04-05	05-06	06-07	07-08
Enrollment	330	318	316	321	291	296	286.5	282	253	253.5
Data provided by Mountz School, 2008										

Due to the age of the Borough's school, facility maintenance and improvements are a constant concern. The current Long Range Facilities Plan identifies a total of \$967,500.00 for upgrades to school systems for the years 2005 till 2009, including renovating the gym, replacing the roof, replacing the air conditioning and re-pointing the exterior brick.

The only private school located in Spring Lake is the St. Catharine School, founded in 1932, an educational ministry of St. Catharine-St. Margaret Parish. The school serves students in grades K-8 and its enrollment stood at 485 students for the 2007-2008 school year. That is a 25-student reduction from the 2006-2007-school enrollment. St. Catharine's maintains an 18.9 student to teacher ratio and employs 25 teachers throughout the year. A breakdown of enrollment by grade is provided below:

Table 20A: St. Catharine School Enrollment (2007-2008)	
Kindergarten	39
1st Grade	53
2nd Grade	52
3rd Grade	54
4th Grade	65
5th Grade	60
6th Grade	47
7th Grade	59
8th Grade	56
Total	485
Source: National Center for Educational Statistics Website (accessed 5/11/09) http://nces.ed.gov/globallocator/sch_info_popup.asp?Type=Public&ID=341557004106	

As the population of Spring Lake Borough is not projected to rise significantly, and it appears that these institutions have fairly stable enrollments, major capacity issues for either the Borough's public or private schooling system are not foreseen.

Spring Lake Public Library

The Spring Lake Public Library is located at 1501 3rd Avenue inside the Community House. Events at the library are updated frequently through the Library website which can be accessed at <http://www.springlake.org/library/index.html>. Due to inventory of materials and the limited amount of space available within the library, updating/rehabilitation or possible building expansion should be examined to improve storage space and also to expand the range of services offered at the library.

Religious and Fraternal Organizations

Adding to the social fabric of Spring Lake is the strong network of religious and fraternal organizations, many of which have been present in Spring Lake for over a century. **Table 21**, Religious Organizations, lists the religious organizations with churches or buildings in Spring Lake. **Table 22**, Fraternal Organizations, indicates the fraternal organizations established in the municipality.

Spring Lake Train Station

The renovation of the Train Station building to be renamed Spring Lake Recreation Center will boast new bathrooms and be handicapped accessible. Planned as a multi-use public building, the Spring Lake Recreation Center will be used for Borough activities and programs for seniors, children and other interested parties. In addition, the interior of the building will also get a face-lift including a wide screen TV, furniture and other leisure items. In recognition of all of the past financial support the building has received from the Spring Lake Five Race, the walls will be decorated with vintage photographs and race memorabilia.

RECOMMENDATIONS

The Borough has employed an incremental approach to the provision of municipal services as Spring Lake's population and services have remained relatively stable for some time. This is a fiscally prudent course and provides planning for the upgrading and expansion of community services, as they are needed. Consequently, the facilities operated by the municipality, except in a few instances, are sufficient for the needs of residents. Several recommendations, however, are included for future planning efforts by

the Borough of Spring Lake. While Spring Lake currently provides its residents with an abundance of service facilities, there are a number of ways in which the Borough could improve on and expand its community facilities. The following is a list of recommendations:

1. It is recommended that Spring Lake continue to maintain the Borough's community facilities and review the feasibility of expanding services, i.e., expanding the use of park gazebos and associated areas for public presentations, concerts and the like.
2. Implement the recommendations of the Circulation Element. As the functionality and accessibility of municipal services are often dependent upon traffic circulation patterns, the Community Facilities Plan Element should be consistent with the Circulation Element. Specific attention should be paid to the traffic and circulation control at the Borough's recycling facility during peak hours, especially on Saturdays.
3. Investigate the potential for implementing a program with Borough residents that would enable residents to receive "stickers or "coupons" with additional stickers available for purchase. This program could address the issue of the frequency of the use of the recycling facility by both patrons that live both within and outside the community.
4. Review existing Development Impact Fees. An increase to these impact fees would provide the Borough with an opportunity to fund and finance larger scale public improvements in lieu of using the Borough's Capital Improvement Fund dollars.
5. Establish a Committee to examine other means of obtaining supplementary County and State grant funding. This will enable the Borough to expand the range of grant opportunities and public improvements that are at the Borough's disposal.
6. Investigate the potential for public/private funding opportunities. The Borough has a long history of funding major public improvement projects with private donations or funds that were raised by non-profit organizations. The Police Station, Devine Park Playground, Downtown Centennial Clock, new streetlights, boardwalk extensions, and new benches are all examples. The State and County funding for the Old First Aid Building will be augmented with matching Borough funding and with private fundraising efforts to minimize the impact on the taxpayers.
7. Prepare a study and develop a plan to improve landscaping and perimeter fencing along 5th Avenue and Monmouth Avenue. The study should incorporate sustainable design principals such as natural filtering planting buffers, recharge zones and rain gardens. The study should also provide attention to the Black Creek embankment and abandoned structures (Water Tower).

CONSERVATION, RECREATION, AND OPEN SPACE ELEMENT

INTRODUCTION

Spring Lake Borough has experienced significant changes in regard to its recreational and open spaces since the Borough's last Master Plan update, which was drafted in 1974. Since that time, the Borough has undergone a transformation from a resort community to a bedroom community, and has also experienced a dramatic increase in land values. However, the Borough's foundation of open space and recreational facilities has remained largely intact and unaltered.

Spring Lake's abundant natural resources and scenic open spaces are a major contributing factor to its identity and regional destination draw. Open space and recreation facilities not only support the 3,567 residents all year long but also support the approximately 30,000 peak seasonal users. The following Conservation and Recreation Element, first, outlines the Borough's Goals and Objectives concerning open space and recreational areas, then provides an inventory of Spring Lake's natural resources and recreational facilities, outlining lastly an action plan for Spring Lake to maintain and expand these lands to meet the needs of residents, continue to attract visitors, and ensure the vitality of the Borough for generations to come.

GOALS AND OBJECTIVES

The Borough of Spring Lake has established the following goals and objectives. These declarations, which will serve as the Borough's defining principals with regards to open spaces and recreational facilities in the Borough, will help to guide discussion and policy making through the future.

The Goals of the Conservation, Recreation and Open Space Element are:

1. Promote conservation of water and other natural resources and promote sustainable "Green" (LEED) development;
2. Set aside open space areas wherever possible so as to maintain the appropriate balance between developed and undeveloped areas of the Borough;
3. Protect and preserve Spring Lake's vast natural resources and environmentally sensitive lands including its wetlands, waterways, habitats for threatened and endangered species, and rare flora;
4. Promote and advance new technologies that serve to improve water quality and reduce the risk of flooding in the Borough of Spring Lake;
5. Protect Spring Lake's vital open space and recreational areas and promote the expansion of recreational services at Marucci Park.

The Objectives of the Conservation, Recreation, and Open Space Element are:

1. To accommodate the year-round recreational needs of both Spring Lake's current and future residents through public, private, and semi-public efforts;
2. To promote the continued prosperity and expansion of recreational services to serve all members of the Spring Lake community and explore possible opportunities to expand the range of recreational services that are offered by the Borough;
3. To acknowledge a deep-seated sense of responsibility to ensure that adequate recreation and open space provisions are provided to the Spring Lake community to the extent that the Borough has opted to tax itself, raise money to pay for new and specific public recreation and community facilities, and seek additional sources of funding in a concerted effort to accomplish these aforementioned goals.

OPEN SPACE & NATURAL RESOURCES

Water Resources

Spring Lake is endowed with extensive water resources in the form of three lakes and significant frontage on the Atlantic Ocean. While the lakes primarily serve the Borough as recreational destinations, the oceanfront provided Spring Lake the opportunity to develop its resort character. Correspondingly, hotels in the Borough developed first along Ocean Avenue to accommodate visitors to Spring Lake with an ocean view and near Devine Park. The main waterways found in the Borough consist of Spring Lake, Lake Como, and Wreck Pond. In addition, Wreck Pond Brook, Polly Pod Brook, and Black Creek are tributary waterways that flow into these aforementioned waterbodies. **(See Figure 6)**

Spring Lake

Spring Lake, which is also known as Divine Park Lake, is located at nearly sea level and is 16 acres in size. The lake features a maximum depth of 12 feet and an average depth of 5 feet, and is used often for fishing. It is an artificial lake, totally surrounded by parkland with no structures. The lake is fed by the springs that created it as well as a number of stormwater outfalls. The lake's outlet drains into Wreck Pond.

Due to the nature of Spring Lake's waters, the stormwater that enters and is held by Spring Lake has impaired it. As such, Spring Lake features increased pH levels in the

spring and summer months when nitrate levels are also highest, most likely due to an increase in the use of fertilizers.

Lake Como

Lake Como was formerly named Three Cornered Pond, as it was originally a small estuary with an outlet to the Atlantic Ocean. However, as the parkland surrounding Lake Como was developed, this outlet was dammed. The shoreline area of the lake consists of grassy banks and trees, as well as ornamental shrubs. The lake contains a depth at one of the basins of 12 feet, and the floor of the lake is primarily weed-choked. Gravel sediment exists in the shallow regions, which becomes silt in the deeper regions. Some small boat activity is permissible on the lake, as is fishing.

Wreck Pond

Clearly, one of the primary concerns for the Borough of Spring Lake's management of natural resources is Wreck Pond. Located along the Spring Lake-Sea Girt municipal boundary and adjacent to the public recreational beaches along the Atlantic Ocean, discharges from Wreck Pond have been responsible for chronic beach closings in Spring Lake's southernmost beaches due to elevated bacterial levels in bathing beach waters after rainstorm events. The Borough of Spring Lake is currently in the process of undertaking a "Wreck Pond Environmental Study" to determine the condition of the pond and to identify optimal control measures to improve water quality, ecological habitat, and flood control. The study is funded through a series of Federal grants under the auspices of the United States Environmental Protection Agency (USEPA). Wreck Pond Brook, Hannabrand Brook, North Branch, and a few tributaries, which include Black Creek, feed Wreck Pond. Hurley's Brook is yet another upstream tributary as it feeds into Wreck Pond Brook. The watershed area that drains to Wreck Pond is approximately 11.5 square miles and contains a mix of wooded areas, agricultural areas, low-to-medium-density residential areas, and mixed-use areas. In addition to the tributary streams, Wreck Pond receives direct stormwater flows through outfall structures from surrounding areas within its watershed.

Tidal floodgates permit flow out of Wreck Pond and into the Atlantic Ocean, but prevent the regular flow of saltwater into the pond. The Borough should investigate through further study whether the new tidal floodgates affect the water quality of Wreck Pond. As per the 1996 South Coast Environmental Planning Region Ecological Resource Inventory, prepared by the Monmouth County Planning Board and Monmouth County Environmental Council, Wreck Pond Brook was designated as a unique area in the County due to its vegetative and environmental resources.

Due to its size and the urban nature of its watershed, the pond, contains an array of characteristics and impairments. Yearly, pH levels in the pond range from a low of 7.0 to a high of 9.0. The nitrate levels are high in the spring, when the most runoff occurs. Further, the highest nitrate levels are found in the inlet areas of the lake. Runoff and warmer temperatures during the spring and summer also causes excessive Coliform

levels. Further Wreck Pond Brook and Wreck Pond are included on Sublist 5 of the NJDEP's 2004 "Integrated List of Impaired Waterbodies". As such, the Brook has been qualified as an impaired waterway for benthic macro invertebrates, while the pond itself is listed as impaired due to phosphorous.

According to published findings, 50 of the 59 ocean swimming bans in the State of New Jersey in 2004 and 58 of the 80 closings in 2003 were caused by overflow from Wreck Pond. Potential sources of contamination include stormwater flow into the pond, waterfowl use, pet waste and the like. These closings also negatively impacted the private and public beach economy.

In fact, the Borough estimated a daily loss of \$5,000.00 during the 2004 Beach Season due to frequent public beach closings in the Pier Beach area, which is located at the outfall pipe from Wreck Pond. These closings are directly attributable to elevated fecal levels from the pond's stormwater discharge into the Atlantic Ocean.

To address the pond's water quality and flooding issues, several governmental initiatives are taking place simultaneously. First, the NJDEP has recently completed a project that extends Wreck Pond's outfall an additional 300 feet out into the water of the Atlantic Ocean. However, in regards to water quality it is still unclear as to whether the longer pipe will result in an improvement in water quality at the beach. To determine the effect of the outfall extension, government officials have conducted extra water sampling during storm events to observe the effect of the outfall extension. The results of the sampling will determine if the outfall extension project has been successful.

Simultaneously, the New Jersey Department of Environmental Protection (NJDEP) has proposed a dredging of the pond to improve water quality and reduce the impacts of overflows on ocean water quality. But as governmental funds to complete this project have yet to be allocated, it is unclear when a large Wreck Pond dredging project will be undertaken and whether or to what degree the outfall extension will improve water quality at the beaches. As part of the study by Najarian Associates, Inc., sediment sampling of the pond and Black Creek upstream will be completed to consider if dredging of the pond is feasible and/or beneficial to improving water quality in Wreck Pond and its surrounding habitat.

The "Wreck Pond Environmental Study" being completed for the Borough by Najarian Associates, Inc. will also include a hydrologic modeling of the pond to address flooding issues that have been experienced as recently as October 2005. In addition, all of the outfall pipes that discharge into the pond will be sampled during a storm event to determine the amount of pollutants each outfall is discharging to the pond and suggest the best management practices that are most appropriate to improve each impaired outfall.

On a larger scale, the Monmouth County Planning Board (MCPB) has initiated a committee to develop a Regional Stormwater Management Plan for the Wreck Pond watershed. The Borough is also an active participant in the preparation of the Wreck Pond Watershed Regional Stormwater Management Plan (WPWRSMP). The Committee,

which is organized and is currently pursuing this effort, is comprised of representatives from Spring Lake Borough and a number of surrounding communities and governmental bodies. This project, under the leadership of the MCPB, is a working group which endeavors to develop a Regional Stormwater Management Plan and more stringent design standards and apply them to the entire watershed so as to improve water quality and reduce beach closings. The WPWRSMP activities include, but are not limited to, the design of plans to reduce flood damage, minimize runoff from new development, reduce soil erosion, assure the adequacy of existing and proposed culverts and bridges, maintain the integrity of stream channels for biological functions, and minimize pollutants in stormwater to restore, enhance, and maintain the chemical, physical, and biological integrity of the waters contained in the watershed.

The WPWRSMP is expected to characterize the watershed, calculate groundwater recharge volume, determine the hydrologic and hydraulic relationships at work in the watershed, determine existing and potential sources of pollution, utilize existing computer model techniques that can be used as stormwater management tools, develop drainage area specific water quality and water quantity management targets, and establish design and performance standards for Best Management Practices (BMP's) that might be installed within the Wreck Pond watershed. Once the pond's Regional Stormwater Management Plan is complete, this Municipal Stormwater Management Plan and the Borough's Stormwater Control Ordinance may be amended to incorporate the goals, objectives, and design standards that are specified in the plan. Therefore, once the Wreck Pond RSWMP is completed, the WPWRSMP will be reviewed and amended as necessary to ensure consistency between the two reports.

Waterway Maintenance

The Borough of Spring Lake's municipal borders include Spring Lake in its entirety and the majority of Lake Como and Wreck Pond as well. These three lakes provide many regional benefits. All of the waterbodies serve as grade stabilization structures, by reducing the overall slope of the stream system. These also function as local stormwater basins, which provide varying levels of stormwater attenuation and all of the water quality benefits that are associated with these types of facilities. The waterbodies also provide aesthetic benefits to the community, recreational benefits for humans, and a valuable habitat for flora and fauna.

The benefits of the aforementioned waterbodies are dependant upon the ongoing maintenance of these features. To avoid significant potential problems, it is necessary that each of the three (3) lakes within the Borough be proactively managed to ensure the stability and continued functionality of these features.

Therefore, it is recommended as part of this Plan that a comprehensive management plan and maintenance schedule be adopted for all three lakes in the Borough. The recommended action includes benefits such as:

- A standardized, comprehensive approach for maintaining and managing each lake

- A long term plan that will ensure the health and adequate function of each lake for future generations of residents
- Prevention of the costly rehabilitative costs which would have to be incurred following a major failure of the system

Further, a comprehensive Lake/Pond Management Plan should address the following items:

Siltation & Dredging

The maintenance plan should address issues such as sediment source control, dredging, and in-water sediment reduction or collection systems/structures. Although costly, the option of dredging may be necessary in order for each lake to maintain an attractive and healthy biological function. The NJDEP is currently examining dredging Wreck Pond and the Borough has contacted NJDEP about the possibility of “piggybacking” a dredging project involving Spring Lake with the Wreck Pond effort. In any case, prior to dredging, plans should be implemented to limit and contain the future impacts of siltation.

Vegetation Management

The Borough should also consider a policy of maintaining a healthy, diverse barrier surrounding each water body. This effort would help to reduce the impacts of non-point source runoff into the waterbody as these features provide an effective filter from overland runoff.

Wetlands

Wetland areas have a variety of different names. They involve mangroves, marshes, swamps, bogs, prairies, vernal pools, potholes and sometimes forested areas. Wetlands act as transitional areas between well-drained uplands and permanently flooded regions or waterways. They are important to our ecosystem for a variety of reasons. They act as nursery areas for fish and other sea-life and provide shelter for amphibians. They are even utilized as safe havens and feeding grounds by migrating birds. In fact, wetlands often contain more animals and plants than nearby waterways. Wetlands also provide protection for humans and their property. They absorb floodwaters and act as barriers from storms. Perhaps the most important purpose wetlands have in our survival is that they act as natural reservoirs and help protect the water quality.

The wetland areas in Spring Lake Borough are depicted in **Figure 6-Wetlands and Waterways Map**. The largest areas of wetlands in Spring Lake are found in the northernmost sections of the Borough, proximate to Lake Como and Marucci Park, along Polly Pod Brook. **(See Figure 6)** The other significant area of wetlands lies adjacent to Spring Lake within the western most areas of Divine Park. Most of the wetland areas in Spring Lake remain undeveloped and some wetlands, like the areas surrounding Spring Lake and Lake Como, are permanently preserved and utilized for passive recreation.

Floodplains

The Federal Emergency Management Agency (FEMA) has devised a mapping and classification system for determining the degree and likelihood of flooding for municipalities across the United States. To inform both public and private land use decision makers of areas that are subject to flooding, the Federal Emergency Management Agency has completed Flood Insurance Rate Maps (FIRM) for the Borough of Spring Lake. The flood risk classifications that have been developed by FEMA to illustrate this risk are defined below:

Zone A – Subject to 100-year flood. Base flood elevation undetermined – Areas within this zone have been determined by the National Flood Insurance Program to be subject to the 100-year flood. BFE's or depths are not shown within this zone because detailed hydraulic analyses are not performed in these areas. Owners of properties located in Zone A are required by law to purchase flood insurance.

Zone AE – Areas subject to 100-year flood with base flood elevation determined - Areas within this zone have also been determined by the National Flood Insurance Program to be subject to the 100-year flood. BFE's or depths are usually shown at selected intervals within this zone because detailed hydraulic analyses have been performed in these areas. Owners of properties located in Zone AE are required by law to purchase flood insurance.

Zone VE – Areas subject to the 100-year flood with an additional velocity hazard (wave action) base flood elevation determined – Zone VE is the flood insurance rate zone that corresponds to the 100-year floodplain that have additional hazards associated with storm waves. BFE's derived from detailed hydraulic analyses are shown at selected intervals within this zone. Owners of properties located in Zone AE are required by law to purchase flood insurance.

Zone X500 – Areas between the limits of the 100-year and 500-year floodplain, or certain areas with average depths less than one-foot (1') or where the contributing drainage area is less than one square mile – BFE's and depths are not shown in this zone and flood insurance is not required by law in these areas.

While the majority of Spring Lake is outside the FEMA Floodplain, there are several areas which have been determined to be possibly subject to a flooding event. Areas located immediately along the banks of Wreck Pond, Spring Lake, Polly Pod Brook (which is also referenced as “Polly Pond Brook” within the NJDEP's GIS data layers), and Lake Como have been designated as an “AE Zone” by the FIRM maps. As illustrated through **Figure 7-FEMA Flood Map**, the areas contained within the “AE” flood zone designation have been found to lie within the 100-year floodplain. Also, portions of the Borough that border the Atlantic Ocean have been designated to lie within the “VE” flood zone due to the ocean's wave action. Further, extensive areas adjacent to

Spring Lake, Wreck Pond, Polly Pod Brook, and Lake Como have been delineated as falling within the “X500 Flood Zone”. These lands have been determined as areas that are either between the limits of the 100-year flood and 500-year flood, or certain areas subject to 100-year flooding with average depths of less than one foot. The term “100-year flood” is the flood elevation that has a one percent chance of being equaled or exceeded each year. Thus, the 100-year flood could occur more than once in a relatively short period of time.

In addition, another flood risk assessment tool that has been developed by FEMA is to establish a location’s Base Flood Elevation. The Base Flood Elevation (BFE) is the average depth of the base flood, usually in feet above the ground surface. Below is a listing of the Base Flood Elevation Marks that have been established within the Borough of Spring Lake.

Table 23: Elevation Reference Marks Within the Borough of Spring Lake	
Elevation	Location
18.720 ft.	A C&GS Triangulation Station Disk Stamped SPRING LAKE 1934, set in top of concrete post projecting four inches above level of ground located 109 feet north-northwest of approximate center of intersection of Worthington Avenue and Ocean Avenue, 78 feet north of north curb of Worthington Avenue and 25.5 feet west of west curb of Ocean Avenue.
15.046 ft.	A C&GS Azimuth Mark disk stamped Spring Lake 1932, set in top of concrete sidewalk; located 38 feet northwest of approximate center of intersection of St. Clair Avenue and Ocean Avenue, 9.0 feet west of west curb of Ocean Avenue and 0.3 feet north of north curb of St. Clair Avenue.
Source: FEMA Flood Insurance Rate Map (FIRM) Spring Lake Borough, Monmouth County, New Jersey. Effective Date: March 1, 1984.	

Spring Lake is continuously monitoring and correcting existing areas of flooding and the Borough actively addresses drainage and flooding issues as they arise and are reported by residents. Spring Lake includes drainage improvements as part of its Capital Improvement Program and is in the process of refurbishing stormwater basins, incorporating concrete aprons when feasible into new road construction projects, and requiring underground Mershon stormwater storage pits for new development applications. In addition, the Borough is also considering allowing the “Rain Gardens” structures that have been developed by Rutgers University as a more aesthetically attractive alternative to the required Mershon pits. The incorporation of Rain Gardens holds the potential to offer land development applicants an important and aesthetically

pleasing alternative to make Spring Lake even more attractive, while enhancing the Borough's ecological health.

As a result of these measures, most of the flooding and drainage issues that occurred in the Borough have been addressed. However, it is imperative to note that a significant portion of the Borough is contained within either the 100-year or 500 year floodplain. The continued imposition of impervious surfaces within the Wreck Pond, Lake Como, and Spring Lake watersheds, as well as the elevated frequency and intensity of tropical systems, all stand to possibly render in peril, portions of Spring Lake that are not within the bounds of these traditional floodplain demarcations. As such, it is imperative that the threat of flooding and its possible effects remain a high priority in Spring Lake for the foreseeable future and that the Borough's emergency services preparedness for floods or other natural emergencies that have recently been implemented continue to be practiced and fine-tuned.

Step Slopes

The topography of the Borough ranges from an elevation of 10 feet in most areas, to 0 to 5 feet in the most low-lying areas. The topography is characterized by nearly level to gently sloping relief. As this generally sloping relief is found throughout the Borough, Spring Lake does not feature any areas of steep slopes.

Soils

In planning for the future of Spring Lake, such elements as topography, the type and drainage characteristics of soils found in the Borough must be considered to ensure that further development harmonizes with the environment and landscape. The Borough of Spring Lake contains eight soil types which range from the poorly drained Atsion series to the well-drained Downer series. The basic soil types found in Spring Lake may be classified as either alluvial or marine with subdivisions of each. Drainage conditions within Spring Lake Borough vary, but generally the soils in the Borough exhibit drainage that ranges from good to excellent. These soils, which are all gently to moderately sloping and nearly level in form, are illustrated in greater detail through **Figure 8-Soils Map**.

Threatened and Endangered Habitats

The New Jersey Department of Environmental Protection Division of Fish and Wildlife has established the Landscape Project program, which aims to protect New Jersey's threatened and endangered species and their habitats. Through the program, the NJDEP has separated the state of New Jersey into five landscape regions. Each one (1) of the landscape regions has been separated into five distinctive land cover types that are critical habitats for wildlife. These land covers and their descriptions are identified below:

Table: 24 Land Cover Types	
Land Cover Type	Description
Grassland	Critical area for grassland-dependent species
Forest	Critical area for forest-dependent species
Emergent Wetland	Critical area for wetland-dependent species
Forested Wetland	Critical area for forest and wetland-dependent species
Beach	Critical area for beach dependent species
Source: NJ Department of Environmental Protection	

Each land cover habitat incorporates five levels of habitats, ranked one through five. These levels are depicted in the following table:

Table 25: Threatened and Endangered Species Habitat Classifications		
Rank Number	Status of Species	Description
1	Suitable	Meet habitat suitability for threatened, endangered or priority species but has no known species that inhabit the area.
2	Priority Species	Includes species that the NJDEP and other wildlife panels have identified as having special or regional concern
3	State Threatened	Contains species that are on the NJDEP's official list of threatened species.
4	State Endangered	Contains species that are on the NJDEP's official list of endangered species.
5	Federal T & E	Contains species that are on the official Federal list of threatened or endangered species.
Source: NJ Department of Environmental Protection		

Spring Lake Borough is located in the Atlantic Coastal landscape region, which is especially important because beaches and marshes in this region are among the most productive coastal habitats in the country. Despite heavy development, these lands continue to support important portions of Atlantic coast populations of colonial nesting birds, such as common terns, little blue herons and great egrets, and endangered beach nesting birds such as least terns and piping plovers. These coastal habitats also support most of the State's ospreys and peregrine falcons, as well large numbers of northern harriers, black rails, and many other non-game species.

The NJDEP's records indicate that currently two species, which are contained on the State's official list of Threatened and Endangered species are located within the Borough of Spring Lake. These species, known as the Least Tern and the Piping Plover both currently hold a rank of 4, which means they are contained on the NJDEP's official list of endangered species. As illustrated through **Figure 9 - T & E Species Map**, both habitat areas are located proximate to the shoreline, near the Wreck Pond outfall to the Atlantic Ocean.

RECREATION PLAN

An Open Space and Recreation Plan (OSRP), as defined by the State of New Jersey's Green Acres Program articulates a local government's vision of open space and recreation. It should establish a philosophical and practical justification for the protection and preservation of open space and recreation opportunities. An OSRP provides a framework for implementation. Through an OSRP, a municipality identifies and examines important open space and recreation resources and articulates a plan for their improvement, expansion, and preservation. As illustrated below, this OSRP has been prepared in accordance with the guidelines of the New Jersey Green Acres program.

Inventory of Existing Open Space and Recreation Facilities

The Borough of Spring Lake currently owns 119.45 acres of open space and 80.89 acres of lands that are available to the public for active or passive recreational use. Spring Lake's parks and recreation facilities make a substantial contribution to the quality of life experienced by residents and enhance its reputation as a desirable place to live and work. In addition to providing a recreational outlet, the Borough's system of parks and recreation facilities provides much needed open space and a gathering place for social and civic events.

All existing State, municipal and non-profit open space and recreational facilities are designated and shown on the accompanying **Table 27: "Inventory of Open Space and Recreational Lands in Spring Lake Borough"** as well as on the "Open Space And Recreational Lands Map", which has been included within this Plan as **Figure 10**. Approximately 200 acres, or 24% of the Borough's land area, is preserved for public use either as recreational land or open space. It should be noted that a large portion of this area is in the form of the continuous beach with ocean access that forms the Borough's easternmost border. As the entire expanse of this area is used for both active and passive

recreation facilities on the beach and boardwalk, it has been included within this inventory.

When compared to the National Recreation and Park Association’s (NRPA) standards, Spring Lake actually exceeds the required amount of recreational land and open space. As such, the acquisition of lands devoted for such purposes is not a high priority. Further evidence of the surplus of open space and recreational lands in the Borough can be found in Monmouth County’s Open Space Plan. **(Table 26)** The County’s assessment reinforces the fact that the Borough of Spring Lake has assembled enough land to meet the communities’ recreational needs. It should be noted however, that this assessment is based on the year round population of Spring Lake (3,569), not the estimated 30,000 seasonal population influx during the summer months.

Table 26: Spring Lake Data from the 2006 Monmouth County Open Space Plan									
	BALANCED LAND USE STANDARD					ACRES/POPULATION STANDARD - 2005

Parks and Recreational Facilities

The Borough’s parks and recreation facilities are intensively utilized for organized and informal recreation ranging from soccer, to lacrosse, to basketball, as well as swimming and little league. Spring Lake offers year round recreational services on a number of sites across the Borough. These circumstances reflect Spring Lake’s built out nature; its limited amount of open space and the high quality of its recreational services and recreational facilities. The primary issue with regard to parks and recreation is the need to maintain the Borough’s existing stock of open space and recreational facilities, as well as planning for the maintenance/upgrading of these features to serve the continually more diverse and changing needs of the Borough’s citizenry. An overview of the Open Space and Recreational lands within the Borough of Spring Lake by State, County, and Municipal ownership, Park and Recreation locations can be seen on **Figure 10**.

The State of New Jersey does not currently own or operate any recreational lands or open space within the Borough of Spring Lake.

Monmouth County

Currently, Monmouth County does not own or operate any recreational lands or open space within the Borough of Spring Lake.

Borough of Spring Lake

The majority of Spring Lake's open space consists of beachfront lands and surface water. Nonetheless, the major recreation issues in Spring Lake are not that the Borough does not currently own and operate an adequate amount of parks or open space. The Borough's parks are intensively utilized for a variety of active and passive recreational activities and there is significant demand upon existing facilities. Accordingly, the crux of this plan is not the planning for preserving additional areas as open space, or the identification of parcels that may be developed as additional areas of recreation. Rather, the Borough is tasked with ensuring that the existing areas in town that are preserved as open space or utilized for recreation continue to prosper for future generations of Spring Lake residents.

Devine Park- Spring Lake and Devine Park combine to occupy 26.05 acres within the Borough. The Lake is utilized for passive recreational use as fishing is permitted along the banks of Spring Lake. Devine Park was upgraded and rehabilitated throughout the mid and late 1980's through both Borough funds and the aid of an NJDEP Green Acres program grant. Currently the park hosts several public events throughout the year. These events include Shakespeare in the Park, summer concert series, the opening day of trout season, model boat events, annual Easter egg hunts, Christmas tree lightings, and more. As evidenced above, due to the Park's bucolic nature, its advantageous location and its recreational assets, it is at the center of passive recreational activities for the Spring Lake community. Also, the playground equipment at the park was completely replaced with climbing equipment while new benches, tables and garbage cans will also be added to the park shortly.

Through the Master Plan visioning process, members of the Spring Lake community expressed interest in restoring some of the ambiance of Devine Park from times gone past through the installation of additional benches, gazebos, and promenades to expand passive recreational opportunities at the park, as well as the park's readiness to hold community/social events. Lastly, as the only public restroom facilities near Spring Lake's downtown area are located at the Spring Lake Police Station, it behooves the Borough to examine the feasibility of constructing publicly accessible restroom facilities either at or proximate to Devine Park.

Marucci Park- Marucci Park is a 23-acre park (almost 10 acres of which are currently utilized by the Borough's Department of Public Works as a leaf recycling area) and recreational facility that contains 5 tennis courts, 2 soccer fields, 2 baseball fields, 1

softball field, 2 basketball courts as well as other active and passive recreational equipment. The playing fields are found in the northwest corner of Spring Lake.

The fields are utilized by a number of different entities including the Spring Lake/Sea Girt joint Little League, and the Spring Lake Recreational Commission, which coordinates several activities at the park including spring soccer and lacrosse.

Spring Lake has placed a high priority on completing studies and plans that will examine the redesigning and upgrading of recreational facilities at the park. As such, other items that are recommended to be considered through the future include: a comprehensive realignment of the facilities at Marucci to include a dedicated soccer field, upgrades to the Little League fields and shack, and improvements to the T-Ball field.

In association with these improvements, Spring Lake is also encouraged to examine the automobile traffic tendencies and circulation patterns proximate to Marucci Park along Third Avenue and South Boulevard and consider roadway improvements that would calm the traffic movements in this area and improve pedestrian safety and access to the park itself.

Potter Park- Potter Park is located in the northwestern portion of Spring Lake, adjacent to Spring Lake Borough Hall, which is located at 5th Avenue and the railroad track proximate to Warren Avenue. The park is just over three acres in size and features a large, landscaped open space with a large gazebo situated in the center.

During the Master Plan visioning process, several members of the community expressed interest in expanding the opportunities for private contemplation or passive recreation such as a game of cards, checkers, or chess at Potter Park by incorporating small tables and/or benches either at Potter Park and/or the Borough's Train Station/Recreation Center.

The Beach- Spring Lake Borough also maintains approximately 54 acres of beach bordering the Atlantic Ocean. This area includes the shoreline, which is available to the public at no cost the majority of the year. During the summer season (Memorial Day to Labor Day), the Borough charges \$100.00 for a seasonal pass, \$60.00 for a half season pass, and \$8.00 for a daily beach tag. The presence of the beach, and the wide area of beach access and boardwalk that is maintained in Spring Lake have historically been, and will remain, a key to the Borough of Spring Lake maintaining its identity as a summertime family oriented beach destination.

The Spring Lake community expressed interest in making the beach a more active recreational destination through the incorporation of children's playground equipment, volleyball courts for adults, and the like. As such, Spring Lake is encouraged to continue to gauge public sentiment and assess possible alternative recreational facilities that may be incorporated onto the beach on either a temporary or a permanent basis. Another issue that is recommended for future consideration and study is the beach's ability to hold community events. By incorporating electrical access and necessary infrastructure,

through the future it may be possible for Spring Lake to expand its summer park concert series onto the beach area itself.

Wreck Pond- Wreck Pond, approximately 43.6 acres in size, is the Borough's largest waterbody, and recently nominated to the Littoral Society as a Coastal Habitat Restoration Area. Wreck Pond is located along the Spring Lake-Sea Girt municipal boundary, adjacent to the public recreational beaches along the Atlantic Ocean. Although Wreck Pond is the largest waterbody in the Borough of Spring Lake, its active recreational contribution is minimal. This circumstance is due in part to the environmental contamination and water quality issues that currently face Wreck Pond, which are discussed in greater detail within the "Action Plan" section of this plan. Although Wreck Pond has environmental concerns currently facing it, the Pond serves as a primary birding area.

Lake Como- Lake Como is the third largest water body within the Borough of Spring Lake and comprises 27.26 acres of land. The Lake was formerly named Three Cornered Pond, as it was originally a small estuary with an outlet to the Atlantic Ocean. However, as the parkland surrounding Lake Como was developed, this outlet was dammed. The shoreline area of the lake consists of grassy banks and trees, as well as ornamental shrubs. The lake contains a depth at one of the basins of 12 feet, and the floor of the lake is primarily weed-choked. However, a recreational activity such as the use of small boats, as well as fishing is permitted on the lake.

Spring Lake's Beach Pavilions

The south end pavilion was constructed in 1929 and the north end pavilion in 1931. The Borough of Spring Lake has maintained the pavilions over the years, with a major renovation to the north end accomplished in 1990. At that time, the pavilion structure and architectural features were refurbished, a new pool liner was installed and improvements were made to the bathroom and dressing facilities. Also, in 2003 renovations to the south end pavilion were completed which involved architectural and structural improvements. A similar upgrade to the pool surface was completed in 1992. Over the years the Borough has, managed to maintain service to both pavilions while tending to normal maintenance issues and pool operation issues. A "Concept and Feasibility Study North and South Pool and Pavilions" report was completed in October of 2004 by a team of consultants and subsequently submitted to the Mayor and Council. This report provided a wealth of information per the existing conditions and observations for improvement at each facility. A synopsis of the issues and conditions at each location follows:

The South Pavilion

The Borough's South Pavilion is located adjacent to the beach on Ocean Avenue in between the terminus of Atlantic Avenue and Salem Avenue. The south end pavilion is built on one floor elevation adjacent to the Boardwalk and is handicapped accessible. The facility currently maintains one swimming pool and baby pool, which is utilized by

the Borough of Spring Lake's Swim Team during the summer swim season. Recent improvements to the South Pavilion have included a new brick face to the building's veneer and brick columns, new railings and windows, as well as repairs to the pavilion's roof. These repairs corrected structural and aesthetic deficiencies, which have in turn significantly improved the operation of the facility. In addition, the upper deck level of the pavilion was repaired with new fiberglass deck flooring as well as a new ceiling finish.

The North Pavilion

The Borough's North Pavilion is located adjacent to the beach on Ocean Avenue at the terminus of Ludlow Avenue. Conditions at the North Pavilion are similar to those at the South pavilion prior to the upgrades that have recently taken place. The exterior brick face and surrounding exterior masonry walls are in need of repair. Additionally, the upper roof continues to leak through the structure and wainscoted ceiling of the upper deck. Unlike the South End, the surrounding walls of the pool deck are enclosed with an open decorative masonry enclosure wall and concrete cap. The north Pavilion maintains a chemically treated saltwater pool for recreation.

Outlook for the Future

The seawater pools at the North and South Pavilions are popular amenities within the community. The purpose of the facilities is to provide a venue for healthy recreation and socialization among members of the Spring Lake community.

The 2004 report on these Borough facilities indicated that residents of Spring Lake are rather united in support for maintaining and upgrading these amenities, as well as their preference for continuing the tradition of filling the pools with seawater, although there is some divergence of opinion as to whether the pools should be filled with filtered and chemically treated water, or continuously changing, untreated salt water. Nonetheless, based upon a structural engineering analysis completed in 2004, both pools have completed their usual life cycles and should be replaced. In addition, each facility's perimeter overflow system is badly deteriorated and ineffective overall.

The Borough is committed to maintaining and upgrading these facilities in order to meet the needs of its residents. As such, Spring Lake is finalizing plans to upgrade and refurbish the North Pavilion. Also, additional upgrades are also planned for the South Pavilion within the next 5-10 years as funds become available. Funding sources to defray the costs that these upgrades would impose on the Borough will be exhaustively researched in order to minimize the tax dollars necessary to move forward with these improvements.

Needs Analysis

In 2000, the U.S. Census indicated the Borough's total population was 3,567. This was an approximate 1.9% population increase from the 1990 population of 3,499. The overall

Borough median age was 47.7. The distribution of the children within the Borough was as follows:

- Ages 4 and under: 205 children (5.7%)
- Ages 5-17: 617 children (17.4)

The National Recreation and Park Association (NRPA) recommend that 6.25 to 10.50 acres of developed open space land be provided for every 1,000 persons. Therefore, the Borough should have between 23 and 38 acres of developed open space. Presently, the Borough features approximately 200 acres of dedicated open space and/or recreational facilities.

The Borough of Spring Lake has numerous volunteer recreation organizations offering organized sports at both the local competition level and the traveling competition levels. Generally, these organizations are funded through sign-up fees, fund raising and sponsorships, with only a small percentage of tax dollars being utilized. A summary of the recreational activities that are currently being provided by the Borough as well as the approximate numbers of Spring Lake Borough residents participating in these activities has been provided below:

- **Little League:** 300 children (league is comprised jointly with children from Spring Lake Heights And Sea Girt Borough)
- **Spring Lake Swim Team:** 80 children
- **Soccer:** 125 children
- **Summer Recreation:** 150 children
- **Basketball Clinic:** 25 children
- **Lacrosse Clinic:** 25 children

The Borough's Recreational Element Subcommittee has indicated that with the exception of the Borough's winter basketball program, sufficient capacity exists to accommodate the demand for service at present and through the foreseeable future. However, it may be necessary to propose moving the winter basketball program service to a larger facility, possibly to an expanded, upgraded and reoriented Marucci Park, should additional upgrades take place. Currently, alternatives such as rearranging the fields to maximize space, as well as additional buildings on site that could potentially house a recreation center, basketball court, meeting rooms and other amenities to serve the community have been conceptually explored by the Borough.

Table 28: Existing Recreation Facilities Compared to Public Need				
Recreational Facility	NRPA Standard per Person	Public Demand (2000)	Existing Number	Public Demand (2025)
Baseball/Softball Field	1/5,000	1	4	1

Tennis Court	1/2,000	2	6	2
Volleyball Court	1/5,000	1	N/A	1
Field Hockey	1/20,000	0	0	0
Golf (9 Hole)	1/25,000	0	0	0
Golf Driving Range	1/50,000	0	0	0
Swimming Pool	1/20,000	0	0	0
Running Track	1,20,000	0	0	0
Trail System	1/region	0	2	0
Community Center	1/25,000	0	0	0

As illustrated within **Table 28** above, not only does the amount of recreational land in Spring Lake exceed the NRPA standards, but the actual number of recreational facilities surpasses the accepted standards as well. However, these benchmarks only reflect the number of the Borough’s recreational facilities, ignoring the location of the parks, and the adequacy of parks in terms of apparatus, design, access and other important factors. The true measure for a park system’s adequacy is community satisfaction. Spring Lake’s very active recreation programs continue, however, to push the limits of the existing facilities in terms of the adequacy of available field times.

The Borough recognizes the importance of community satisfaction and has an active Recreational Committee to provide better community feedback on facilities and programs. Based on an analysis of the existing park and recreational inventory and future needs, as well as meetings and conversations with stakeholders, engaged citizens, and the Borough’s professional staff, it has been determined that additional recreational upgrades will be necessary in order to meet the Borough’s recreational goals and future needs. These items are discussed in greater detail within Spring Lake’s “Action Plan”, which follows this subsection.

EFFORTS TO PUBLICLY PRESERVE OPEN SPACE AND ENHANCE RECREATION

Spring Lake’s idyllic setting and abundant recreational opportunities are a part of what makes Spring Lake such an attractive community and has sustained the Borough through time. The Borough’s administration understands the need to preserve open space and

provide adequate recreational facilities whenever the opportunity and funding presents itself, which has left the Borough with very well planned and well-maintained facilities. The Borough's commitment to open space and recreational activities is also evident in that the Borough maintains a full time Recreation Department, an established Environmental Commission and an active Open Space and Recreation Committee. However, facilities do need to be upgraded over time, and Spring Lake is no exception to this rule.

PRESERVATION TOOLS

There are a number of different techniques that can be utilized by Spring Lake in order to generate funds to upgrade existing recreational facilities, or acquire additional lands to preserve as open space or utilize for as additional recreational space. Some of these techniques are more valuable tools than others, while some are more economically feasible but may not provide permanent preservation. The following are examples of some techniques for acquiring open space that the Borough may consider:

Fee Simple Acquisition – This type of acquisition is the outright purchase of a property at fair market value from a willing seller. This type of land acquisition is typically the most expensive preservation tool.

Tax Foreclosure – This preservation occurs when a parcel falls under Spring Lake's ownership through tax foreclosure. The Municipality can consider holding a foreclosed property for conservation or recreation purposes if it is suitable for such uses.

Easement Rights – A municipality can purchase easement rights from a landowner for conservation or agricultural easements. Easements may be purchased for the purposes of establishing a greenway or trail through a property, to maintain a scenic vista, to preserve a natural landscape or to purchase the development rights for farmland preservation. Easement rights are typically less expensive than fee simple acquisitions and allow landowners to keep their land. Depending upon the type and flexibility of the easement, the municipality may continue to collect property taxes on the land.

Installment Purchases – The municipality can utilize funds from the Open Space Trust Fund to purchase a property for conservation/recreation over a period of time. In this case, the Borough allocates the agreed upon purchase price through a series of installments. The property owner may receive interest on the unpaid balance and may qualify for tax credits.

Lease-Back Agreement – This type of agreement is beneficial if a property owner wants long-term preservation of a property, but wishes to maintain use of the property for a period of time. The Borough may purchase a property and then lease it back to the original owner or another association for use. A life estate can also be utilized in this type of situation.

Land Donation – This is an ideal situation for the Borough but is also a rare occurrence. Landowners should be better educated on the benefits of land donations such as tax benefits and reduction in capital gains liabilities.

Long-Term Lease – This preservation option can be utilized in situations that involve landowners that are unwilling to transfer complete ownership to the Township. This tool is good for recreational fields or public trails, but it does not preserve land in perpetuity.

Eminent Domain – This tool should be considered only as a last resort when all other possible negotiations have failed. A municipality has the right to acquire a property through condemnation for public use. This option often results in litigation and may prove to be even more expensive than fee simple acquisition as a result of court costs and lawyer fees.

Zoning – Cluster Zoning, Land Transfer Zoning and Land Conservation Zoning have all been proven successful tools for the preservation of land for conservation and recreational purposes. Cluster zoning allows developers the same or increased density on a tract of land but reduces individual lot sizes. The remaining land that has not been developed can be dedicated to the Township for permanent deed restricted open space. Land Transfer Zoning establishes sending zones that where land is to be preserved, and receiving zones that are to be developed more intensely. Land Conservation zones establish restrictive development regulations that aim to preserve large continuous tracts of land.

FUNDING SOURCES

Once Spring Lake has determined how to proceed to acquire a property for preservation, a funding source must be identified. Following are several grant and loan programs offered to municipalities for the purchase of open space for conservation and recreation that the Borough may be eligible for and should consider. In addition to these publicly funded programs, there are also many non-profit organizations that purchase property for conservation.

Local and State Funding Programs

Monmouth County Municipal Open Space Grants - The Board of Chosen Freeholders has allocated \$2 million from the annual Monmouth County Open Space Trust Fund for cooperative projects with Monmouth County municipalities. Both land acquisition and development for park, recreation, and open space purposes are eligible for funding.

On December 22, 2009, the Board of Chosen Freeholders selected projects from various municipalities in the County for its 2009 funding. Spring Lake's Marucci Park was one of the projects selected to receive \$175,000. The County will mail letters soliciting applications for 2010 funding to municipalities on or about May 1, 2010.

New Jersey Green Acres Program – This Program provides funding assistance for the acquisition and development of municipal park and recreation areas. The program's Planning Incentive program provides municipalities with grants and loans for land acquisition costs to purchase specific parcels listed on the Township's ROSI. Additionally, Green Acres offers financial assistance to qualifying non-profit organizations that own conservation or recreational land and permits public use of those lands.

Environmental Infrastructure Finance Program – The New Jersey Department of Environmental Protection administers this program in cooperation with the New Jersey Environmental Infrastructure Trust. Among other program priorities, NJDEP/NJEIT provide financing to local government entities for the purpose of acquiring open space that will help maintain the water quality. The Trust aims to achieve a cleaner, healthier environment by protecting ground and surface water resources that affect the drinking water supplies.

Federal Funding Programs

National Parks Service Land and Water Conservation Fund (LWCF) – The LWCF program provides matching grants to States and local governments for the acquisition and development of public outdoor recreation areas and facilities. The program is intended to create and maintain a nationwide legacy of high quality recreation areas and facilities and to stimulate non-federal investments in the protection and maintenance of recreation resources across the United States.

Federal Emergency Management Agency (FEMA) The Flood Mitigation Assistance Program (FMA) was created as part of the National Flood Insurance Reform Act (NFIRA) of 1994 (42 U.S.C. 4101) with the goal of reducing or eliminating claims under the National Flood Insurance Program (NFIP). FEMA provides FMA funds to assist States and communities implement measures that reduce or eliminate the long-term risk of flood damage to buildings, manufactured homes, and other structures insurable under the National Flood Insurance Program.

Three types of FMA grants are available to States and communities:

- **Planning Grants** to prepare Flood Mitigation Plans. Only NFIP-participating communities with approved Flood Mitigation Plans can apply for FMA Project grants
- **Project Grants** to implement measures to reduce flood losses, such as elevation, acquisition, or relocation of NFIP-insured structures. States are encouraged to prioritize FMA funds for applications that include repetitive loss properties; these include structures with 2 or more losses each with a claim of at least \$1,000 within any ten-year period since 1978.

Technical Assistance Grants for the State to help administer the FMA program and activities. Up to ten percent (10%) of Project grants may be awarded to States for Technical Assistance Grants. *National Oceanic and Atmospheric Administration (NOAA)* -Coastal and Marine Habitat Restoration Projects support valuable fisheries and protected resources, improve the quality of our water, provide recreational opportunities for the public's use and enjoyment, and buffer our coastal communities from the impacts of storms and sea level rise. Projects funded through NOAA have strong habitat restoration components that provide social and economic benefits for people and their communities in addition to long-term ecological habitat improvements. Deadlines for applications are in April for the next year.

ACTION PLAN

The Borough of Spring Lake is dedicated to maintaining its existing areas of recreation and dedicated open space. As indicated earlier, the Action Plan will not focus on obtaining new lands as Spring Lake is endowed with a sufficient amount of recreational and open space and, as it is built out in nature, additional lands and undeveloped green space are almost non-existent. As such, the Borough of Spring Lake has developed the following Action Plan to meet its present and future needs concerning the appropriation of lands for recreation and open space within the Borough:

Upgrade Marucci Park

The Borough had sought a grant through the Monmouth County Department of Recreation to upgrade and expand the plumbing and accessory facilities at the park but was recently denied grant money. In addition to these efforts the Borough of Spring Lake community has overwhelmingly emphasized that the first and foremost priority in terms of recreation in the Borough is the reorganization of fields at Marucci and the expansion of facilities there, which are currently underway.

It is also recommended that the Borough undertake a specific initiative dedicated to the planning and potential funding sources that may be utilized to upgrade Marucci Park, as well as to examine what, if any, additional recreational programs can be initiated by the Borough to better serve the needs of Spring Lake's residents.

Upgrade Both the North and South Pavilions

The seawater pools at the North and South pavilions are popular amenities within the community. Based upon structural engineering analysis, it seems clear that the pool structures at both pavilions have completed their usual life cycles and should be replaced. New structures would also be consistent with the modification or replacement of the adjacent deck areas so that deck-borne water is conducted away from the pools. The perimeter overflow systems at both facilities are also badly deteriorated, and have become generally ineffective. New perimeter systems constructed of type 316L stainless steel would provide the required performance while also affording low maintenance and

eliminating most of the piping in the pipe tunnels around the pools. Efforts should be made to improve the landscaping design in and around the pavilions to enhance the visual presence of the structures.

As the purpose of the pavilions is to create a friendly venue for healthy recreation and casual socialization among members of the Spring Lake community, the ideal municipal aquatic complex will include programming for all ages, from toddlers to seniors. Although the existing pools are large enough to meet the needs of the community, certain modifications could stand to greatly enhance both the facilities' utility and their potential to serve the public.

Depending on community preference, certain more passive recreational aspects may be included in the plans to upgrade and enhance the pavilions. For instance, aspects such as a beach (0-depth) entry, in-pool seating, and moderate water features such as mushroom fountains, modest water slides, and similar items may be researched for their possible incorporation into one or both of the pavilions. Lastly, the aesthetics and functionality of the pavilions are recommended to be improved during the upgrading of each site. Specifically, the large obtrusive and possibly unstable masonry walls that surround both facilities are recommended to be improved. More deck space is needed at both pavilions to provide additional socialization areas and open space for children to play, as well as additional space for sunbathing, shade sitting, game playing, eating and other activities that accompany a day at the pool.

Research Potential Funding Alternatives for the Maintenance of Existing Open Space and Recreational Facilities

In order to realize the upgrading and refurbishing of existing recreational lands within the Borough, Spring Lake is encouraged to explore opportunities for funding such as those programs that have been outlined previously within this Plan so as to acquire the capital necessary to realize the maintenance, expansion, and/or upgrading of the recreational facilities within Spring Lake. Further, it is recommended that the Borough review the feasibility of dedicating a full time staff member to reviewing and submitting grants to various governmental and philanthropic organizations on behalf of the Borough to fund improvements while expending a minimal amount of tax dollars to do so.

Continue to Support Municipal, Regional, and State efforts to improve Wreck Pond

Although the NJDEP has completed the outfall extension project at Wreck Pond, several other initiatives to improve the overall ecology of the Pond, reduce the risk of flooding to residents as well as contamination caused by the pond are still in progress. The Borough will continue to remain committed to being a willful and engaged partner in the on-going Wreck Pond Environmental Study, the Wreck Pond Regional Stormwater Management Plan (RSWMP), as well as the additional NJDEP measures that are currently under consideration at the State level.

The NJDEP is currently employing a multi-faceted approach towards lessening the impacts of the pond's discharge on neighboring beach areas. The plan is comprised of the following elements all of which, with the exception of the outfall extension, have yet to be finalized or completed.

- Dredging of Wreck Pond and Black Creek to remove sediment;
- Stormwater management measures to stem sediment loading in Wreck Pond;
- Extension of the pond outfall pipe to move the mixing zone further offshore; and
- Wildlife management measures to reduce fecal loadings that affect water quality.

As part of the State's effort, sediment traps will be placed in the western portions of the ponds watershed. Twelve to fifteen of these manufactured treatment devices were scheduled to be installed sometime during 2008/2009. However, the formal dredging of Wreck Pond, should it be approved by the State, is not scheduled until 2016.

Work is also continuing on the Borough-initiated Wreck Pond Environmental Study, which also aims to improve the overall quality of Wreck Pond and its associated tributaries and watershed. The Borough has requested a study that will evaluate alternative solutions to improve the water quality of Wreck Pond and reduce beach closings related to pond outflow, while preserving habitat quality. The principal goal of this project is to improve the ecological condition of Wreck Pond and its tributaries within the Borough of Spring Lake. Work for this project includes: water sampling, hydrological modeling, pollution prevention measures, waterfowl control options, preliminary design for upgrading outfall structures and investigation into the feasibility of a Flood Warning System being installed for flooding events that occur on Wreck Pond.

No initiative alone will resolve the Wreck Pond watershed issues. However, working in close partnership with local governments and through strong solicitation of public input and support, Spring Lake can improve the Wreck Pond watershed and reduce the number of beach closings in this area and restore Wreck Pond to the proper condition it deserves. From the Wreck Pond Study, the Wreck Pond Watershed Association was formed, whose mission is to foster responsibility to care for natural resources and ensure that they are sustainably managed for current and future generations.

Maintain and Improve Recreational Walking Path and Trail Linkages

The Borough of Spring Lake is bestowed with exceptional public open spaces, and natural areas for recreation. Yet another way to improve these locations is to foster additional linkages between these areas and Spring Lake's downtown in order to create a more vibrant, dynamic relationship between these the locations for active and passive recreation and consumption.

These linkages will promote greater economic activity along Main Street, foster additional intermodal, non-automotive transportation linkages through Borough, and help to upgrade and preserve the Borough's existing open space and recreational facilities.

Due to the significant amount of beach access in Spring Lake, it is recommended that additional trails and/or signage linking the beach and boardwalk areas to other portions of the Borough be incorporated to create a more synergistic relationship among the Borough's various destination points.

SUMMARY OF RECOMMENDATIONS

1. Incorporate additional recreational facilities on the beach for both children and adults to enjoy active recreation in the form of playground equipment and/or volleyball nets, and other active recreation uses.
2. Expand the utilization of Potter Park and the few concerts that are currently held in the late spring and summer months.
3. Move to restore the former ambiance of Devine Park through the installation of additional benches, gazebos, and promenades to expand passive recreational opportunities and the parks readiness to hold community/social events.
4. Make efforts to expand the summer park concert series onto the beach by incorporating electrical access and necessary infrastructure to accommodate such an event.
5. Improve synergy between Devine Park, Potter Park, and downtown by enhancing pedestrian and biking linkages between the destinations in the Borough such as the Train Station/Recreation Center, Devine Park, and downtown. Consider expanding public facilities (bathrooms and the like) at Devine Park and near downtown, as currently the police station is the only alternative.
6. Improve pedestrian access at Marucci Park by initiating traffic calming and landscaping elements along Third Avenue and South Avenue.
7. Complete a comprehensive study of the realigning of recreational fields at Marucci Park to accommodate the Borough's growth.
8. Consider the expansion of passive recreational opportunities by incorporating small tables and/or benches for passive recreational activities such as chess, cards, checkers, Parcheesi, and the like to Potter Park, in and around the Borough's Train Station/Recreation Center, and also at Devine Park.
9. Suggest returning Wreck Pond for recreational uses such as birding, canoeing, fishing and crabbing
10. Consider assigning someone at the Borough, whether board member or employee, to become LEED certified/accredited to help guide sustainable development opportunities.

11. The Shorefront Master Plan initially prepared in 1995 (the only municipality in New Jersey to prepare one) should be updated to provide up-to-date information about the conditions of the shorefront activities, structures and plans for the future.
12. The Borough should seek additional funding and permitting for the design and implementation of pumping stations to reduce the water levels in Wreck Pond and Lake Como, by pumping directly to the ocean, before flood levels get to high. Construction of an emergency spillway or overflow pipe to alleviate flooding should also be investigated.
13. Recommend the Wreck Pond Watershed Association and its supporting municipalities; work with NJDEP to assess the outcome of the improvements to Wreck Pond to determine the overall success or failure of the project.

HISTORIC PRESERVATION ELEMENT

BACKGROUND

Spring Lake was formed as a Borough by an Act of the New Jersey Legislature on March 14, 1892 from portions of Wall Township. The Borough is primarily residential in nature with a proud history. Through the protection of aesthetically appealing architectural elements and utilizing existing infrastructure, historic preservation is paramount to achieving smart growth and sustainable community development. However, historic preservation is not just about maintaining attractive buildings. The reuse of existing infrastructure prevents the further destruction of our valuable ecosystem. Historically, significant sites are often those that already provide a town with open space, recreational, and scenic vistas. After all, our ancestors sought rest and relaxation just as much as we do.

Historic preservation also provides a foundation for economic development. Historic districts are often centers of tourism, commerce, and government that draw regional populations. In fact, a recent study conducted for the New Jersey Historic Trust indicated that for every one million dollars invested in the preservation of New Jersey residential historic buildings, 25 new jobs and 1.1 million dollars in economic activity are generated at the state level. Further, on a national scale, these multipliers increased to 75 jobs and 2.5 million dollars in economic activity.

As the area that now comprises Spring Lake is rich in historic resources. The first steps in the historic preservation process involve the development of a community policy to safeguard historic resources, and the identification of the particular resources to be protected in the community. The goal of this Historic Preservation Element is to formulate a clear plan of action in Spring Lake to protect the historic integrity that continues to contribute to the Borough's charm, and economy.

In order to ensure the unique historic and architectural integrity of the Borough of Spring Lake, historic preservation and protection policies should be integrated within Spring Lake's zoning regulations and land use controls. Considerable protection of historic resources can be provided by the implementation of appropriate use, density, and design standards in areas of the Borough that contain significant historic resources. These lands use controls can include site plan review, clustering regulations and transfer of development rights. These and others are discussed in greater detail below.

In accordance with N.J.S.A. 40:55D-2(j), which promotes "the conservation of historic sites and districts, open space, energy resources and valuable natural resources in the State to prevent urban sprawl and degradation of the environment through improper use of land," the overall goal of the Historic Preservation Element of the Spring Lake Master Plan is to provide the basis for the continued preservation of the Borough's resources and to recognize additional areas within the community that would be deemed worthy of historic designation.

GOALS AND OBJECTIVES

The Goals of the Historic Preservation Plan Element are to:

1. Acknowledge the importance of historic resources in providing a link to the past, and their ability to preserve appearances and enhance economic development.
2. Preserve the Borough's unique character, enhance the visual appearance of neighborhoods, and promote economic development.
3. Encourage an appropriate and harmonious setting for the historic and architecturally significant facilities within the Borough of Spring Lake.
4. Promote aesthetically pleasing human scale development that recognizes the historical character and varied architectural tradition of the Borough of Spring Lake.
5. Encourage the continued use of historic properties and resources. Promote their appropriate reuse to improve property values and discourage the unnecessary demolition of historic resources.
6. Encourage private investment in existing or new structures in a manner that preserves, restores, or repairs the original architectural styling of a building.

The Objectives of the Historic Preservation Plan Element are to:

1. Strengthen the harmony and appearance of the downtown streetscape where appropriate by encouraging the preservation of existing buildings and ensure that all new construction and alterations fit harmoniously within the framework established by the architectural character of the Downtown District.
2. Complete a historic resources survey and possibly a Historic District Designation Report to examine if portions of Spring Lake are suited for historic designation.
3. Encourage the preservation of historic structures located throughout the Borough of Spring Lake.
4. Encourage the updating and upgrading of the existing historic buildings that have been inappropriately altered, restoring them to their original historical state.
5. Increase awareness about historic preservation in the Borough.
6. Encourage municipal action that will result in long-range preservation of historic assets throughout the Township.

7. Promote energy efficiencies of older homes without taking away from the historical or architectural integrity.

THE HISTORIC DESIGNATION PROCESS

National Register of Historic Places

The National Register of Historic Places is the official list of America's historic and cultural resources. Districts, sites buildings, structures and objects of significance in American history, architecture, archeology, culture and engineering on the national, state or local levels are eligible for the National Register. The New Jersey State Register of Historic Places is the official list on New Jersey's historic and cultural resources. Created by the New Jersey Register of Historic Places Act of 1970, Chapter 268, Laws of 1970 – N.J.S.A.13:1B.128, the State Register is closely modeled after the National Register. The State of New Jersey has incorporated the State Register nomination process into the National Register process, and is responsible for administration of the National Register at the State level. Both Registers use the same eligibility criteria, nomination form and review procedure.

A number of protections and benefits are available for registered properties. As an example, the State and National Registers provide a degree of review and protection with regard to encroachment from publicly funded projects.

The Act defines these historic resources as indicated below:

Building: Any structure created to shelter human activity.

Examples: Houses, barns, schools, railroad stations, theaters, factories.

Structure: Any construction other than a building

Examples: Bridges, lighthouses, water towers, tunnels, canals or other civil engineering structures.

Object: A construction of functional, aesthetic, cultural, historical or scientific value that may be moveable but is also generally related to a specific setting or environment.

Examples: Boats, locomotive, monuments, sculptures.

Site: The location of a significant event, prehistoric or historic activity or remnant of a building or structure.

Examples: Battlefield, landscape, ruins of a building or structure.

District: *A geographically definable area containing buildings, structures, objects and/or sites that are linked historically or aesthetically by plans or physical development and acknowledge to possess collective importance.*

Additionally, the act designates four (4) criteria that a historic resource must have in order to be listed on the National Register:

Criterion A: Associated with events that have made a significant contribution to the broad patterns of our history.

Criterion B: Associated with the lives of persons significant in our past.

Criterion C: Embodying the distinctive characteristics of a type, period, or method of construction, or representing the work of a master or possess high artistic values, or representing a significant or distinguishable entity whose components may lack individual distinction.

Criterion D: Have yielded or may be likely to yield information important in prehistory or history.

Review and Compliance – National Register

Section 106 of the National Historic Preservation Act of 1966, as amended, provides for the review of properties listed in, or eligible for, the National Register of Historic Places by any federal agency which is sponsoring or licensing any undertaking which may impact upon these historic and cultural resources. Under Title II of the Act, the Advisory Council on Historic Preservation, an independent federal agency comprised of representatives of 17 federal agencies and 12 private citizens must be given the opportunity to review and comment upon a proposed project or undertaking.

Federal regulations that govern the Section 106 review process require that the State Historic Preservation Officer be given an opportunity to provide consultation comments. It is the responsibility of the federal agency to present the State Historic Preservation Officer with adequate information on National Register listed, or potentially eligible, cultural resources, and any effect the proposed project may have on such resources. If cultural resources are identified that may be adversely affected by the proposed project, the federal agency must work with the staff of the Advisory Council to resolve those identified conflicts.

Review and Compliance – State Register

The New Jersey State Register Law provides a review procedure for state, county or municipal undertakings that would encroach upon properties that petition for inclusion on the State Register. An encroachment is an undertaking which will have an impact on a

State Register listed property but does not include routine maintenance. In accordance with N.J.S.A.13:1B-15.131, it is the responsibility of the state, county or municipality to determine whether any of their undertakings or projects would encroach upon State Register listed properties and, if so, to provide information on project description, purpose and effect upon such properties to the Commissioner of the New Jersey Department of Environmental Protection. The Commissioner, in turn, solicits the advice and recommendations of the New Jersey Historic Site Council, which is an advisory body of public members appointed by the Governor. All projects encroaching upon State Register listed properties require authorization from the Commissioner.

Unlike the federal Section 106 review process, which provides for review of projects affecting properties eligible for, as well as listed on, the National Register, the State review process applies only to projects effecting properties listed on the State Register.

Information on the State and National Register of Historic Places, as well as technical assistance regarding the identification, evaluation, and protection of historic resources, is available from the Office of New Jersey Heritage, CN 404, Trenton, New Jersey, 08625.

The Borough of Spring Lake has a number of historic resources that reflect its evolution. A comprehensive listing of those structures that have been included on the State of New Jersey and National Register of Historic Places is indicated in the **Table 28** below and shown on **Figure 11**.

Table 29: New Jersey and National Registers of Historic Places- Spring Lake Borough
Audenried Cottage (Normandy Inn) (ID#2057) 21 Tuttle Avenue SR: 1/14/1991 NR: 3/8/1991 (NR Reference #: 91000117) (Spring Lake as a Coastal Resort MPS)
Frederick A. Duggan Memorial First Aid and Emergency Squad Building (Spring Lake First Aid & Emergency Squad Building) (ID#3366) 311 Washington Avenue COE: 6/6/1997 SR: 6/30/1998 NR: 9/18/1998 (NR Reference #: 98001177)
Holy Trinity Episcopal Church (ID#2058) Monmouth and Third avenues SR: 1/14/1991 NR: 3/8/1991 (NR Reference #: 91000116) (Spring Lake as a Coastal Resort MPS)
Martin Maloney Cottage (ID#2059) 101 Morris Avenue SR: 1/14/1991 NR: 10/26/1992 (NR Reference #: 91000115) (Spring Lake as a Coastal Resort MPS)

Monmouth County Historic Properties

Although the State and National Registers inventory the certified historical sites at each respective level, there are additional properties that may be qualified as historically significant yet have not been officially petitioned for inclusion in the State Register.

Monmouth County Planning Board spearheaded an initiative to inventory sites with countywide historical significance that are not on the State or National registers. The end result of this effort took the form of the Monmouth County Historic Sites Inventory, which was completed, in 1980 and updated in 1990. Since its completion many of the

properties identified within the document have become eligible for nomination as historical sites or have received historic designation.

RECOMMENDATIONS:

1. It is recommended that the Borough of Spring Lake establish a Historic Preservation Commission to act in an advisory capacity to the Land Use Boards to ensure that development within the Borough preserves historical and architectural integrity.
2. The most successful defense against the destruction of historic resources is designation at the municipal level. A Historic Preservation Ordinance suggests that the Borough is deeply committed towards preserving and enhancing the icons of its rich history. In order to improve on Historic Preservation, the following recommendations are being made:
 - Establish Historic Districts – Areas containing several historically significant structures should be designated Historic Districts so as to ensure that their architectural integrity and historic significance is preserved.
 - Include *Architectural Design Standards for New Construction* for each of the historic districts in the Zoning Ordinance.
3. Historic Preservation Review Process for all Applications for Development prior to Borough approval would enable the Borough to establish that once a site has been designated as a historic landmark or located within a historic district, it is protected by a requirement that the owner obtain a “certificate of appropriateness” before a permit is issued or any work or activity is commenced on a property. A periodic review process will enhance communication and correspondence between the Borough and the Historic Preservation Commission.
4. It is recommended that the Borough undertake an updated survey in order to determine those sites in Spring Lake that could be deemed worthy of historic designation. In addition, the survey should identify the condition of the historic structures and make recommendations as to whether the structures are candidates for rehabilitation.

RECYCLING PLAN ELEMENT

INTRODUCTION

The State of New Jersey passed a voluntary recycling act in 1981, the success of which prompted the 1987 Statewide Mandatory Source and Separation Act. The Act required all New Jersey counties to establish recycling plans and all municipalities to provide a collection system for recycling. The Act also spawned the adoption of the Municipal Solid Waste Plan, which set goals for the recycling of a minimum of 25% of New Jersey's municipal waste stream each year. In 1993, the State of New Jersey adopted amendments to the Municipal Solid Waste Plan that strived to achieve a 50% recycling rate of the State's municipal solid waste stream. The State is currently in the process of adopting another amendment to the Municipal Solid Waste Plan and has produced a 2005 Draft Statewide Municipal Solid Waste Plan that maintains the 50% recycling rate goal for the municipal solid waste stream. Once adopted, the 2005 New Jersey Municipal Solid Waste Plan will mandate all counties to adopt new recycling plans.

As per N.J.S.A. 40:55D-28b(12), a Master Plan may include a recycling plan element which incorporates the State Recycling Plan goals, including provisions for the collection, disposition and recycling of recyclable materials designated in the municipal recycling ordinance, and for the collection, disposition and recycling of recyclable materials within any development proposal for the construction of 50 or more units of single-family residential housing or 25 or more units of multi-family residential housing and any commercial or industrial development proposal for the utilization of 1,000 square feet or more of land.

GOALS & OBJECTIVES

The Goals of the Recycling Element are to:

1. Promote recycling to reduce the solid waste stream and increase the reuse of natural resources.
2. Expand recycling services throughout the Borough.
3. Provide services that promote efficiencies and create a system that is user friendly.
4. Maximize the amount of recycled materials collected from residential and non-residential properties.
5. Encourage existing commercial and industrial uses to recycle and support the development of "green" industries that incorporate recycling into the production process.
6. Continue to increase recycling awareness through community outreach.

The Objectives of the Recycling Element are to:

1. Continue to increase recycling awareness through community outreach.
2. Create an efficient, user-friendly drop-off process at the Borough's Recycling Center
3. Investigate expanding pick-up dates of curbside recycling to twice per month.
4. Curb illegal dumping activities at the recycling center as well as throughout the Borough.
5. Provide more effective access monitoring and restrictions to better control non-residential and unauthorized use of the center.

In addition, the State of New Jersey Bureau of Recycling and Planning sets forth the following goals:

1. Increase demand for recyclable materials and recycled products
2. Increase the supply of high quality secondary materials;
3. Maximize the overall efficiency of the recycling infrastructure; and
4. Further recycling-related job development in the collection, processing and manufacturing sectors.

RECYCLING PLAN

In conjunction with the State Recycling Plan goals and the Monmouth County recycling program, Spring Lake Borough has been dedicated to the maintenance of an aggressive recycling program that strives to recycle a large percentage of the Borough's total waste.

Within the Borough of Spring Lake's 1988 Master Plan Re-examination a "Mandatory Source and Recycling" Section was included as an appendix to illustrate the Borough's compliance with the State of New Jersey's Statewide Mandatory Source Separation and Recycling Act.

That document has identified the fact that the officials within the Borough have already addressed the need for a Recycling Plan and embraced the recycling goals as adopted by the State of New Jersey. The Monmouth County Solid Waste Management Section requirement for the submission of a proposed or adopted Recycling Plan Element with the necessary changes to the Borough of Spring Lake's ordinances have been satisfied with the adoption of Ordinance No. 14-1986 on December 22, 1986 and the submission of the same to the Monmouth County Planning Board.

Spring Lake Borough's current recycling program involves Spring Lake's Public Works Department and the Monmouth County Recycling facility.

The Borough of Spring Lake's Municipal Reclamation Center is open Monday through Saturday from 8 am through 4 pm. The Center is located at Fifth and Salem Avenues, and a member of the Public Works Department is on hand to assist residents in disposing of their recyclable materials during these hours.

The Borough's Reclamation Center features designated recycling containers for the following materials: newspapers, mixed paper (junk mail telephone books, magazines), metal items such as appliances, bicycles, and other large, heavy metal objects (excluding refrigerators, air conditioners, freezers, and dehumidifiers), leaves (no grass), corrugated cardboard (empty boxes), bulky household items (excluding construction materials), co-mingled plastic/aluminum (glass bottles and jars, bi-metal and aluminum food and beverage cans, and plastic pourable containers), brush (tree limbs, hedge and shrubbery trimmings), and clothing bins. Spring Lake also provides a curbside collection of these aforementioned materials on an alternating three to four week basis.

The Borough strongly encourages residents to ensure that these items are all clearly labeled and subsequently placed in the appropriate containers. In order to utilize the reclamation center, residents must place the Reclamation Center sticker on a permanent but portable object so it can be displayed on the dashboard inside the front window in order to enter the Reclamation Center's lot.

Monmouth County offers several outlets for recyclable materials including: washers, dryers, air conditioners, refrigerators, dish washers, water heaters, large dehumidifiers, cast iron sinks and tubs, household batteries, concrete and asphalt, tree stumps and limbs, grass clippings, tires, computer and electronics equipment, and propane fuel tanks. All of these disposal services are offered free of charge with the exception of the grass clippings (disposed of for a fee of \$3.00 per car, or \$35.00 per ton) The Monmouth County Reclamation Center is located at 6000 Asbury Avenue, Tinton Falls NJ.

RECOMMENDATIONS

The Borough is interested in examining innovative ways to improve its public services. Of the many factors that affect the costs and revenues of recycling programs, one of the challenges faced by solid waste managers is to find least-cost management options and, if the community has a recycling component, to examine how to make the system most efficient. The following recommendations are proffered:

- 1) Continue to build on the success of the Recycling Center and strive to improve the efficiency of its operation. The Borough should consider layout changes and the potential use of space made available due to the recent removal of old superfluous structures.
- 2) Expand public outreach and education efforts extolling the environmental benefits of recycling as well as what items may be recycled and where they may be disposed of.

Set benchmarks and goals in the form of a percentage of materials that the Borough will strive to be recycling over a 5, 10, and 25-year horizon.

- 3) Consider incorporating additional services at the recycling center such as electronic recycling (computer, TV's) and paper shredding services on a quarterly basis.
- 4) Provide hazardous waste and latex paint drop off days.

HOUSING ELEMENT

The New Jersey Municipal Land Use Law, N.J.S.A. 40:55D-1 to -136 (“MLUL”) and the New Jersey Fair Housing Act, N.J.S.A. 52:27D-301 to -329 (“FHA”) require every municipal planning board to adopt a Housing Plan Element to its Master Plan and further require the governing body of each municipality to adopt a Fair Share Plan. More specifically, the FHA and MLUL require municipalities to adopt a Housing Element that addresses the municipal present and prospective housing needs, “with particular attention to low and moderate income housing.”

On December 20, 2004, the third round substantive and procedural rules of the Council on Affordable Housing (“COAH”) became effective. On January 25, 2007, the Appellate Division of the Superior Court of New Jersey delivered an opinion which sustained, and invalidated, certain sections of N.J.A.C. 5:94. In particular, this opinion affected all municipalities’ ability to precisely determine their Cycle III affordable housing fair share and also called into question certain compliance techniques used since December 20, 2004 to address “growth share” obligations. Subsequent to this decision COAH adopted revised third round rules (NJAC5: 96 and 5:97), which became effective on September 22, 2008.

Within these rules, COAH set forth a time frame for submission of a petition for substantive certification for municipalities within Union County of December 31, 2008.

On December 9, 2008 the Housing Element of the master plan was adopted by the Planning Board as a separate Element of the Master Plan.

STORMWATER MANAGEMENT ELEMENT

In compliance with the State of New Jersey's newly adopted Stormwater Rules (NJAC 7:8), and the United States Environmental Protection Agency's Phase II Regulations, the Borough of Spring Lake drafted and adopted a Stormwater Management Plan (which serves as the Stormwater Management Element of the Master Plan) in October 2006.

In compliance with the regulations set forth through NJAC 7:8 4-2, this plan was then submitted to the Monmouth County Stormwater Technical Advisory Committee (STAC) for review. Upon a formal review of both Spring Lake's Stormwater Management Plan and its Stormwater Control Ordinance, the STAC subsequently issued a condition approval of these items, which necessitated revisions to these items per the County's requests.

As the conditions set forth by the STAC have since been completed and both the readopted Stormwater Plan and Stormwater Control Ordinance have been readopted by the Borough, both items will be reviewed by the Monmouth County STAC for formal approval on October 4, 2007. Upon the issuance of a formal approval, the Borough's revised Stormwater Control Ordinance will be enforceable by the Borough of Spring Lake.

The Borough of Spring Lake's Stormwater Plan and Ordinance were formally approved by the Monmouth County Planning Board on October 15, 2007. Copies of both the Borough's adopted Plan and its corresponding enforcement ordinance can be viewed at the Borough Clerk's office.

MASTER PLAN CONSISTENCY

As required under the State of New Jersey's Municipal Land Use Law (MLUL) a "master plan shall include a specific policy statement indicating the relationship of the proposed development of the municipality as developed in the master plan to:

- (1) The master plans of contiguous municipalities;
- (2) The master plan of the County in which the municipality is located;
- (3) The State Development and Redevelopment Plan, adopted pursuant to the State Planning Act;
- (4) The district solid waste management plan of the County in which the municipality is located (NJSA 40:55D28d). The following section of this chapter fulfills this requirement; in addition, the relationship of the Borough's 2001 Reexamination Report will also be included.

Master Plans of Contiguous Municipalities

Spring Lake Borough shares land boundaries with the following municipalities: Lake Como, The Borough of Sea Girt, Spring Lake Heights Borough, Wall Township, and Belmar.

The zoning and land uses that have been adopted for lands bordering Spring Lake Borough in Sea Girt, Spring Lake Heights, as well as the Lake Como Borough appear to be consistent with the planning principles that have been adopted for proximate areas of Spring Lake. In sum, these areas have been zoned for single-family residential uses, which are consistent with the lands within Spring Lake that border these municipalities.

However, it should be noted that any zoning changes or other public policy revisions that Spring Lake may consider for implementation in the area of the Spring Lake Rail Station through the future should consist of additional coordination and cooperation of the Borough of Spring Lake Heights as this facility is located adjacent to the border of both municipalities.

State Development and Redevelopment Plan

The State Development and Redevelopment Plan provide a general framework for the future development of New Jersey. Municipal Master Plans should comply with the goals and policies outlined in the Plan to ensure the quality of life for all residents. The New Jersey State Planning Commission adopted the latest Plan on March 1, 2001. However, on April 28, 2004, the New Jersey State Planning Commission approved the release of the Preliminary State Development and Redevelopment Plan and the Preliminary State Plan Policy Map. This action launched the third round of Cross-acceptance, a process designed to encourage consistency between municipal, county, regional, and state plans to create a meaningful, up-to-date and viable State Plan.

Through Cross-acceptance, negotiating entities work with local governments and residents to compare their local master plans with the State Plan and to identify potential changes that could be made to achieve a greater level of consistency with statewide planning policies. Subsequent to the release of the Preliminary State Plan and related mapping in 2004, additional Cross Acceptance mapping was approved by the State Planning Commission on July 19, 2006 and updated on August 1, 2006.

Both the current and the proposed State Plan Policy Map places Spring Lake Borough within the Metropolitan Planning Area (PA1), which is the most urban of the State's 5 planning area classifications. Communities that have been designated as Metropolitan Planning Areas generally exhibit mature settlement patterns with a diminished supply of vacant land. In established communities such Spring Lake, and other municipalities located proximate to the Borough, the reuse of existing properties will be the major form of new construction. The land use policy objectives of Metropolitan Planning Areas are to:

- (1) Promote redevelopment and development in Cores (i.e., downtowns) and neighborhoods through cooperative regional efforts.
- (2) Promote diversification of land use, including housing where appropriate, in single use developments, and enhance their linkages to the rest of the community.
- (3) Ensure efficient and beneficial utilization of scarce land resources to strengthen its diversification and compact nature.

Consequently, the Borough's Master Plan recognizes this designation and will support the intent and principles of the State Plan. Further, the overall objectives and policies of the Spring Lake Master Plan shall be consistent with these goals.

Monmouth County Growth Management Guide/ Coastal Monmouth Plan

The Monmouth County Growth Management Guide (GMG) is the Master Plan for future development in Monmouth County. The GMG, which was adopted in 1995, divided Monmouth County into five (5) regions. A comprehensive set of planning Goals, Objectives, and Policies for the Bayshore region, of which Spring Lake Borough is a part, have been adopted and are considered elements of the County's 1995 Growth Management Guide.

Presently, these items still qualify as the overall planning policy guidance document at the County level. As such, during the drafting of the Spring Lake 2009 Master Plan update process, Spring Lake will ensure that its Master Plan efforts are consistent with the Goals, Objectives and Policies that have been adopted and incorporated into the Monmouth County Growth Management Guide.

It should also be noted that Spring Lake, along with 29 other contiguous municipalities are currently participating in a regional planning effort that was initiated by the Monmouth County Planning Board. This effort was initiated to culminate in a cohesive plan for the future development of the County's Atlantic Coastal Region which features

municipalities that range from cities to developing suburban areas to small, fully developed beachfront towns. Many are long-established "Shore" towns, historically associated with summer tourism, which are now being developed and redeveloped to accommodate thousands of new, permanent residents. Other communities, which are more inland, are also engaged in redevelopment and revitalization.

The Coastal Monmouth effort will strive to create a land use plan that will accommodate market demands while directing growth in a sustainable manner that considers environmental resources and community character. The Coastal Monmouth Plan is anticipated to be complete in January of 2008.

Monmouth County Solid Waste Management Plan

The Spring Lake Master Plan update will be consistent with the goals of the Solid Waste Management Plan of Monmouth County. The Borough of Spring Lake has incorporated waste management requirements that are consistent with those of Monmouth County and also utilizes the County owned landfill for its recycling initiatives.
